Kenneth J. Carney, M.D.
kjcarne@emory.edu

Dear Dr. Carney:

Enclosed are two Georgia Statutory Short Form Durable Power of Attorney for Health Care for your mother. One states that she wants her life prolonged and the other does not.

Enclosed, also, is a General Power of Attorney.

With best regards.

Sincerely,
GARY BUNCH, P.C.

Gary Bunch

GENERAL POWER OF ATTORNEY

TO ALL PERSONS, be it known, that I, Dorothy Jean Carney, the undersigned Grantor, do hereby make and grant a general Power of Attorney to my oldest son Kenneth J. Carney, M.D. and do thereupon constitute and appoint said as my attorney-in-fact in the event that I become disabled and unable to take care of my affairs.

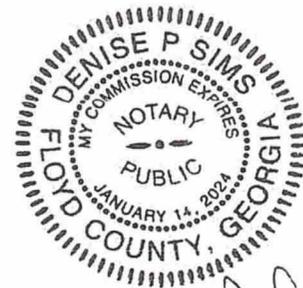

My son as my attorney-in-fact shall have full powers and authority to do and undertake all acts on my behalf that I could do personally, with full power of substitution and revocation, including but not limited by said authority the right to sell, deed, buy, trade, lease, mortgage, assign, rent or dispose of any of my present or future real or personal property; the right to execute, accept, undertake and perform any and all contracts in my name; the right to deposit, endorse, or withdraw funds to or from any of my bank accounts, depositories or safe deposit box; the right to borrow, lend, invest or reinvest funds on any terms; the right to initiate, defend, commence or settle legal actions on my behalf; the right to vote (in person or by proxy) any shares or beneficial interest in any entity, and the right to retain any accountant, attorney or other advisor deemed necessary to protect my interests generally or relative to any foregoing unlimited power.

Signed under seal this 14 day of March, 2021.

Dorothy Jean Carney
Grantor

GEORGIA STATUTORY SHORT FORM
DURABLE POWER OF ATTORNEY FOR HEALTH CARE

DURABLE POWER OF ATTORNEY made this 14 day of March, 2021.

1. I, Dorothy Jean Carney, of Rome, Georgia, hereby appoint my oldest son Kenneth J. Carney, M.D. of Atlanta, Georgia, as my attorney-in-fact to act for me and in my name, in any way I could act in person, to make any and all decisions for me concerning my personal care, medical treatment, hospitalization and health care and to require, withhold or withdraw any type of medical treatment or procedure, including the provision or withholding of nourishment and fluids, even though my death may ensue. The decisions of my agent made pursuant to this power shall be respected regardless of the contrary wishes or intentions of other members of my family. My agent shall have the same access to my medical records that I have, including the right to disclose the contents to others. My agent also shall have full power to make a disposition of any part or all of my body for medical purposes, authorize an autopsy of my body and direct the disposition of remains.

I do not want my life to be prolonged nor do I want life-sustaining or death-delaying treatment to be provided or continued if my agents believes the burdens of the treatment outweigh the expected benefits. I want my agent to consider the relief of suffering, the expense involved and the quality as well as the possible extension of my life in making decisions concerning life-sustaining or death-delaying treatment.

Initialed DJ.C.

2. This power of attorney shall become effective immediately.
3. This power of attorney shall not terminate except upon my written request.
4. If a guardian of my person needs to be appointed, I nominate my oldest son Kenneth J. Carney, M.D. to serve as my guardian.
5. I am fully informed as to all the contents of this form and understand the full import of this grant of powers to my agent.

Signed *Dorothy Jean Carney*
 Dorothy Jean Carney
 Principal

The principal has had an opportunity to read the above form and has signed the above form in our presence. We, the undersigned, each being over eighteen years of age, hereby witness the principal's signature at the request and in the presence of the principal, and in the presence of the witnesses on the day and year above set out.

**ORDER DENYING CROSS-PETITIONER
KENNETH JEFF CARNEY, MD'S SECOND MOTION FOR SUMMARY JUDGMENT**

Before the Court is the Second Motion for Summary Judgment (“Motion”) filed by Cross-Petitioner Kenneth Jeff Carney, M.D. (“Dr. Carney”), seeking his appointment as guardian and conservator of Dorothy Jean Bishop Carney (“Proposed Ward”), based on his nomination and appointment in various Powers of Attorney documents executed in March 2021. Petitioner Jerome Carney (“Mr. Carney”) has filed a Response in Opposition to the Second Motion for Summary Judgment and a Statement of Disputed Facts, challenging the appropriateness of summary judgment and raising substantial disputes as to both fact and law.

Having reviewed the Motion, the Response, the briefs, the parties’ respective statements of fact, supporting affidavits, transcripts, attached exhibits, relevant case law, and applicable statutes, the Court issues the following decision and order.

I. BACKGROUND AND RELEVANT FACTS

This matter arises from cross-petitions for the appointment of a guardian and conservator for Dorothy Jean Bishop Carney, an elderly individual currently residing at The Harbor, a memory care facility in Douglas County, Georgia. The proceedings were initially commenced in the Probate Court of Floyd County, Georgia, and were subsequently transferred to this Court after the Ward was relocated to Douglas County.

The parties to this action are the Proposed Ward's two sons: Jerome Carney ("Mr. Carney" or "Petitioner"), a retired Government of Quebec dignitary who relocated to Douglas County; and Kenneth Jeff Carney, M.D. ("Dr. Carney" or "Cross-Petitioner"), a licensed physician, who has served as the Proposed Ward's attorney-in-fact pursuant to a Durable Power of Attorney for Health Care and a General Power of Attorney executed in March 2021 (hereinafter collectively referred to as the "POA"). Both sons have filed petitions seeking appointments as guardian and conservator of the Proposed Ward, each asserting that such appointments would serve her best interests.

The procedural history is complex. Mr. Carney initially filed his petition for the appointment of a guardian and conservator in Floyd County in February 2022, and Dr. Carney subsequently filed a cross-petition seeking the same relief. During the pendency of those proceedings, Dr. Carney, exercising his authority under the POA documents, relocated the Proposed Ward from her prior residence in Floyd County to The Harbor, a memory care facility in Douglasville, Georgia, *without* prior notice to the Floyd County Probate Court, the court-appointed attorney, or the guardian ad litem. This relocation became the subject of an emergency motion and subsequent hearing in Floyd County. Ultimately, the Floyd County Probate Court ordered that the entire matter be transferred to Douglas County for further proceedings.

Dr. Carney now moves for summary judgment on the grounds that his status as attorney-in-fact under the 2021 POA documents, and the preferences, appointments, and nominations stated therein, entitle him to immediate appointment as guardian and conservator for the Proposed Ward. Dr. Carney further asserts that the facts necessary to support such appointments are undisputed, that no genuine issue of material fact exists, and that he is entitled to judgment as a matter of law, citing extensively to *In re Estate of Kurtzman*, 366 Ga. App. 725 (2023). He contends that this dispute does not require a hearing or trial to determine whether the Ward needs a guardian and/or

ORDER

The Court, January 12, 2023, held a Hearing on the emergency motion of Cross- Petitioner K. Jeff Carney, M.D., PharmD.’s (“Dr. Carney”), pursuant to Uniform Probate Court Rule 6.6, for a hearing to approve the transfer of the Proposed Ward Dorothy Jean Bishop Carney (“Ms. Carney”) to the memory care unit of The Harbor at Douglasville. The Court heard argument by the parties’ counsel and testimony from Tina Lankford, Dr. Carney and Steve Lankford. Petitioner Jerome Carney (“Mr. Carney”) did not present evidence. But Mr. Carney’s counsel cross-examined the witnesses. After the evidence was closed, John Scott Husser, Jr. (“Mr. Husser”), Ms. Carney’s Court appointed attorney, made a statement to the Court on Ms. Carney’s behalf.

The Court makes the following findings of fact. Ms. Carney is cognitively impaired to the extent that she is unable to live independently and needs to be in a memory care unit. Ms. Carney, during April 2022, had been moved to the Winthrop Memory Care in Rome, Georgia where she resided until July 9, 2023. Ms. Carney's sister Mae Stanfield, also, resided at Winthrop's Memory Care unit and shared a room there with Ms. Carney.

Winthrop Memory Care recently announced its intention to close its memory care unit. The closing of Winthrop's memory care unit requires the relocation of Ms. Carney and his sister. The un rebutted evidence is that keeping the sisters together is in both sisters' best interest.

Dr. Carney, upon learning that Winthrop was closing its memory care unit, did not disclose that fact to Mr. Husser or the Court appointed Guardian Ad Litem Jim Foss ("Mr. Foss"). Rather, Dr. Carney, along with Ms. Stanfield's daughter Tina Langford and her husband Steve Langford, independently looked for another memory care unit for the sisters.

Dr. Carney and the Langfords determined that it would be in the sisters' best interest to be placed together in The Harbor at Douglasville's memory care unit. Therefore, Dr. Carney and the Langfords signed a contract with The Harbor at Douglasville for the sisters to be placed together in its memory care unit. As a

precaution in the event that they become displeased with The Harbor at Douglasville, Dr. Carney and the Langfords placed Ms. Carney and her sister second on the waiting list for the memory care unit at the Renaissance in Rome, which is affiliated with The Harbor at Douglasville.

Dr. Carney's counsel Friday, January 6, 2023, filed an emergency motion to have Ms. Carney placed in The Harbor at Douglasville's memory care unit. Dr. Carney's counsel requested an "immediate hearing on the motion as time was of the essence."

As stated above, the Court held a Hearing on Dr. Carney's emergency motion January 12, 2023. But, before the Hearing, Ms. Carney and her sister were moved, Monday, January 9, 2023, into The Harbor at Douglasville's memory care unit. Neither Mr. Husser nor Jim Foss, at the time, were not notified of Ms. Carney's relocation to The Harbor at Douglasville.

Mr. Husser, at the Hearing, stated to the Court his displeasure with the process by which Ms. Carney had been relocated without notice prior to the Hearing. But Mr. Husser stated that, in his opinion, it was in Ms. Carney's best interest to remain at the Harbor at Douglasville with her sister and not be moved again. And the Court finds credible the testimony of Mrs. Langford, Dr. Carney and Mr. Langford about the quality of service and the healthy and positive

environment provided by the Harbor at Douglasville to the residents in its memory care unit.

The Court gives great weight to Mr. Husser's statement to the Court. The Court, like Mr. Husser, is displeased with the process of transferring Ms. Carney to The Harbor at Douglasville prior to a Court hearing and without prior notice to Ms. Carney's Court appointed attorney and Guardian Ad Litem.

But the outcome determinative issue is not the process of relocating Ms. Carney. Rather, the outcome determinative issue is Ms. Carney's best interest. The Court finds that being in the memory care unit with her sister at The Harbor Douglasville is in Ms. Carney's best interest.

Therefore, the Court grants Dr. Carney's motion. Ms. Carney, until further Court Order, is to reside in The Harbor at Douglasville's memory care unit.

In addition, the Court transfers venue of this case to the Probate Court of Douglas County, Georgia. The pending petition for appointment of an emergency guardian and/or emergency conservator for the Proposed Ward is dismissed without prejudice and all future proceedings and matters in this case are to be heard and ruled upon by the Douglas County Probate Court. All future scheduled hearings in this Court are cancelled.

Dr. Carney is to pay the costs of copying and transferring the record to the Douglas County Probate Court. Upon payment of costs, the Clerk is directed to transfer the entire record in this case promptly to the Probate Court of Douglas County, Georgia.

Further, Mr. Husser and Mr. Foss are directed to submit their fee requests in this matter within the next ten days. And Ms. Carney is to pay those fees within ten days.

The Douglas County Probate Court will appoint a new attorney and new Guardian Ad Litem for Ms. Carney, if Douglas County Probate Court determines that an attorney and Guardian Ad Litem for Ms. Carney are needed.

SO ORDERED, this 17th day of January, 2023.

Honorable Steven R. Burkhalter
Floyd County Probate Judge

IN RE: ESTATE OF

DOROTHY JEAN BISHOP CARNEY

ESTATE NO. 23G0010

**KENNETH JEFF CARNEY, MD'S AFFIDAVIT
FILED IN SUPPORT OF MOTION FOR
SUMMARY JUDGMENT**

STATE OF GEORGIA

COUNTY OF DEKALB

AFFIDAVIT OF KENNETH JEFF CARNEY, MD

Before me came the undersigned, Kenneth Jeff Carney, MD, ("Jeff Carney, MD") Of 955 Clifton Road NE, Atlanta, Georgia 30307, who after being duly sworn, deposes and states as follows:

1.

My name is Kenneth Jeff Carney, MD. I am over eighteen years of age, and I suffer from no legal disabilities.

2.

I give this Affidavit for the purposes of showing the creation and current use of a Power of Attorney given to me by my mother, Dorothy Jean Bishop Carney (hereinafter "Dorothy Carney" or "Ward"), and for use in this Guardianship Petition filed by my brother, Jerome Carney, and for all other purposes and uses allowed by law.

DEFINE MEDICAL BACKGROUND

3.

1

I am a Medical Doctor licensed to practice medicine in the State of Georgia. After I graduated from High School, I Enlisted in The United States Air Force. In 1984 I was admitted to Mercer University Pharmacy School, and I graduated *Magna Cum Laude* In 1988 with a Doctor of Pharmacy degree. In 1989, I was admitted to the Medical College of Georgia.

4.

I worked my way through medical school (as a practicing pharmacist) without any financial support from my family or financial aid or loans. I graduated debt-free with my MD degree in 1993. After medical school, I completed postgraduate internships and residency training in General Surgery and Urology. I completed fellowships in Urologic Oncology, Trauma, and Reconstructive Surgery. I have continually practiced medicine in the State of Georgia from 2001 until the present.

FAMILY BACKGROUND

5.

I am not married, and I have no children. My father was named Dave Kenneth Carney. He died on August 7, 1984. My Mother is Dorothy Jean Carney. She was born on February 28, 1941. She resides in a memory care home in Douglasville, Georgia, known as The Harbor at Douglasville, 8847 Hospital Drive, Douglasville, Georgia 30134 (hereinafter "The Harbor").

6.

The Harbor is an assisted living facility located in Douglasville, Georgia. It offers a memory care unit for residents with dementia.

7.

My parents only had two children. They are this Affiant - Kenneth Jeff Carney, MD, and my younger brother, Jerome Alton Carney. Jerome Carney was born on December 29, 1963. Jerome Carney attended Georgia State University and graduated with a degree in French. To the best of my knowledge and belief, until his recent retirement, Jerome Carney was employed by The French-Quebec Canadian Government. Based on information and belief, he most recently worked at their Consulate in San Francisco.

8.

In this instant action, Jerome Carney petitioned for guardianship and conservatorship with the Probate Court of Floyd County, Georgia. This action was transferred to Douglas County, Georgia; this affidavit is presented in the current action 23-G-00010. In fact, there were two (2) actions. The original action in Floyd County, Georgia probate was styled: In Re: The Estate of Dorothy Jean Carney, Proposed Ward, Probate Court of Floyd County, State of Georgia, Estate Number 22E30670 (Filed March 28, 2022): Appointment of a Guardian and/or Conservator For a Proposed Ward (CLOSED and Transferred to Douglas County, Georgia

Probate); And the Douglas County Probate Action: In Re: The Estate of Dorothy Jean Bishop Carney, Ward, Probate Court of Douglas County, State of Georgia, Estate Number 23G0010 (Filed June 15, 2023): Appointment of a Guardian and/or Conservator For a Proposed Ward.

THE POWER OF ATTORNEY

9.

A copy of the executed Power of Attorney ("POA") is attached hereto as **Exhibit A**.

10.

The POA came about directly because of my Mother's long-time stated desire, dating back to 2005, to have me, her eldest son, and a medical doctor serve as her POA. The timing of the POA was hastened when my Mother's older brother, Billy Bishop (now 85 and in poor health), indicated in January 2021 that he could no longer care for Dorothy Carney after the end of March 2021. For several years, Billy Bishop, whose house is close to Dorothy Carney's house, was taking care of her. At that time (January 2021), Billy Bishop's wife, Betty M. Bishop, was suffering from kidney failure, and he indicated to my Mother numerous times in January 2021 that he could no longer take care of Dorothy Carney and Betty Bishop, his wife, at the same time. Billy Bishop's wife became seriously ill in January 2021. His wife's deterioration and hourly care motivated Billy Bishop to issue an ultimatum to us that he could no longer care for Dorothy Carney in her own house. Betty Bishop had taken a turn for the worse with kidney failure in January 2021. In Billy Bishop's ultimatum to the family in January 2021, he indicated that he could no longer administer medicine to Dorothy Carney or cook for her daily.

11.

Billy Bishop indicated that he would stop this activity at the end of March 2021. His statements and ultimatums hastened my Mother and me to obtain the POA.

12.

I (affiant) had multiple conversations with Dorothy Carney from January 2021 to the signing of the POA on March 14, 2021. We talked about the POA from January to March 2021, and my Mother's discussions generally focused on the dementia her own Mother had suffered.

13.

Dementia is highly prevalent in the females on the maternal side of our family. My Mother harbored the fear this horrible disease would one day affect her. My Mother, Dorothy Carney, indicated to me on multiple occasions that if she ever developed dementia, like her Mother, she wanted me to be her POA and that if and when the time arrived for her to be placed in a memory care home, she wanted me to be appointed as her POA and if needed her guardian. Her Mother (my grandmother) also had dementia - as did her Mother's (my grandmother's) sister (my Mother's aunt). She also indicated that if she ever needed a guardian, it would be me since I was her eldest son and a medical doctor. Dorothy Carney was very concerned when her older sister, Mae Stanfield, also developed dementia in 2019 and was placed in a memory care facility in Rome, Georgia. I went with my Mother on numerous occasions to visit her sister, Mae Stanfield, in the Rome memory care facility before she herself became a patient there. Her then physician, Dr. Hooda, indicated that she "would be safest at an assisted living facility" rather than living alone in her home. My Mother said to me on many occasions, "If I ever get like my mother (dementia), please put me where my sister is so we can be together."

14.

At the time, I was familiar with Attorney Gary P. Bunch, Gary P. Bunch PC, Carrollton, Georgia. I asked him if he had a form for Powers of Attorney, and he indicated that he could prepare one. The preparations, discussions, and signing of the POA occurred in March 2021.

15.

I worked as a medical doctor during March 2021 and usually had Tuesdays off work. I recollect that I went to Gary Bunch's office in March 2021. That office was located at 208 Corporate Drive, Carrollton, Georgia 30117. While I was in Gary Bunch's office, we called my Mother and put her on speakerphone with attorney Gary Bunch. In my presence, Gary Bunch asked my Mother questions about whether she wanted a POA and who she wanted to be holding her POA, as well as other questions about guardianship if it came up to be necessary.

16.

My Mother indicated to Gary Bunch over the speakerphone that if she ever had to go into a nursing home, she wanted the Affiant, Jeff Carney, MD, to be her guardian and her financial POA and healthcare POA.

17.

Gary Bunch prepared the POA and the guardianship designation on Friday, March 12, 2021. The document was either faxed, emailed, or delivered to me. I took the document prepared by Bunch to the signing. The POA was executed and witnessed at Billy Bishop's home, 8 Green Street, Rome, Georgia 30161, on Sunday, March 14, 2021. It was signed by my Mother's brother, Billy Bishop, and David Bishop, Billy Bishop's son. All of the witnesses are adults and were sui juris.

18.

The signatures of Billy Bishop and David M. Bishop were witnessed and notarized by Denise P. Sims of Floyd County, Georgia, who was present when both witnesses saw my Mother, Dorothy Jean Carney, sign the Power of Attorney.

19.

Paragraph 4 of the POA states, specifically, "If a guardian of my person needs to be appointed, I nominate my oldest son, Kenneth J. Carney, MD, to serve as my guardian".

20.

I, Kenneth J. Carney, signed the POA before my Mother, Dorothy Jean Carney. Notary Public, Denise P. Sims, witnessed my signature at Billy Bishop's house. A few weeks later, Denise P. Sims, the Notary, executed an Affidavit dated April 13, 2021, which indicated that she notarized the general Power of Attorney appointment Kenneth J. Carney MD as agent for Dorothy Carney. She had her signature notarized on April 13, 2021, by Notary Public Justin Mark Laseter of Floyd County, Georgia. This Affidavit is attached as the last page to **Exhibit A**.

THE SIGNING OF THE AFFIDAVIT AT WELLS FARGO

21.

Dorothy Carney was admitted to The Harbor in April 2021. I needed access to Dorothy Carney's bank accounts to make the monthly payments to The Harbor. I went to the Wells Fargo Branch at 2 Redmond Road, NW Rome GA 30165 and showed an officer the POA I had for Dorothy Carney. Wells Fargo said that was POA was fine, but that they would like to talk to their legal department at Wells Fargo. This occurred on Tuesday April 13, 2021. The legal department asked if Denise P. Sims, the Notary Public who witnessed the March 14, 2021 signing of the POA was available? Actually, Denise P. Sims worked nearby. At that time, she worked at a nearby medical office which was located less than one (1) mile from the Wells Fargo Branch on 2 Redmond Road. I called Denise P. Sims and asked if she would come to the Wells Fargo Bank. She agreed to come to the Bank. In a short amount of time, Denise P. Sims showed up at the Wells Fargo Branch on 2 Redmond Road. The Wells Fargo Bank officer asked if she would sign an affidavit that said she was the Notary who witnessed Billy Bishop and David Bishop sign the POA on March 14, 2021? She said she was the Notary on the POA. She said she was asked to Notarize a POA for Dorothy Carney. She said Dorothy Carney was aware that she was giving a POA to her son, Dr. Carney, and that she witnessed Dorothy Carney sign the POA. She witnessed Billy Bishop and David Bishop sign in Dorothy Carney's presence. The Bank officer then typed up the "Affidavit" that is now attached to the POA. Denise P. Sims read the Affidavit and signed it at the Wells Fargo Branch in Rome, Georgia. That Affidavit, which is dated April 13, 2021, was then notarized by Georgia Notary Justin Mark Laseter.

LUCIDITY AT SIGNING

22.

I am of the firm opinion, both as my Mother's son and as a licensed Georgia Medical Doctor (as was Attorney Gary Bunch), that my Mother was lucid when she signed the Power of Attorney on March 14, 2021. She has periods of lucidity and ill lucidity. Presently, at the facility in Douglasville, Georgia, I am of the opinion that she is not lucid and she is presently *non compos mentis*. I have been making decisions for Dorothy Carney pursuant to this Power of Attorney since she entered the Rome, Georgia facility, specifically when she became *non compos mentis*.

TRANSPORTATION FROM ROME TO DOUGLASVILLE

23.

About five (5) weeks after Dorothy Carney signed the Power of Attorney, as per my Mother's stated wishes, she was placed as a patient in Winthrop Court Memory Care with her sister Mae Stanfield, located on Highway 411 East, Rome, Georgia, 30161 (hereinafter "Winthrop"). She was admitted into that facility on April 20, 2021. When that facility closed sometime in early 2023, I was given short notice that Winthrop would be closing and no longer handling patients. That is, every single patient had to be relocated out of Winthrop immediately. The short notice left me with a very compressed timeframe of about one to two weeks to find a new facility and relocate my Mother. Together, my cousin, Tina Langford (daughter of Mae Stanfield), and I located The Harbor at Douglasville, 8847 Hospital Dr, Douglasville, GA 30134, a memory care assisted living facility located in Douglasville, Georgia; and we jointly moved our mothers from Winthrop to the Harbor in Douglasville, Georgia, and jointly signed the contract.

DOROTHY CARNEY AND MAE STANDFIELD

24.

Initially, Dorothy Carney and her sister, Mae Stansfield, had separate rooms in Rome, Georgia. Still, they preferred to sleep together in the same bed as they had in childhood, so even though they had separate rooms and separate beds, they would end up in the same room and bed. Since these were the wishes and desires of our moms, my cousin (Tina Langford – Mae Stansfield's daughter) and I decided to place them in the same room and the same bed.

25.

Dorothy Carney and Mae Stansfield lived together in the Memory Care Unit in Rome (Floyd County) from April 2021 to January 2023.

26.

When my brother and I filed the initial petitions for guardianship, Dorothy Carney and Mae Stansfield were living at Winthrop Memory Care in Rome, Georgia. That's why the original case was in Floyd County Probate Court.

27.

In January 2023, Winthrop, the Rome memory care facility, closed. My cousin and I looked at several different options, and together, my cousin and I decided on the facility in Douglasville and jointly signed the contract.

28.

My cousin, me, and the Douglasville facility were and are still okay with them sharing a room and a bed. When Dorothy Carney was relocated to Douglasville, there was a hearing in Floyd County, and the Floyd Probate Court transferred the legal probate case to the Douglas County Probate Court.

EMERGENCY ROOM VISITS CAUSED BY JEROME CARNEY

29.

Dorothy Carney initially thrived and did very well in the Douglasville Facility, the Harbor. From January 2023 to January 2024, she only had one Emergency Room visit related to her blood glucose.

30.

To the best of my knowledge, my brother, Petitioner Jerome Carney, relocated to Douglasville in January 2024.

31.

Between January 2024 and September 2024, Dorothy Carney has had seven (7) Emergency Room visits for blood sugar-related issues.

32.

On several occasions, the Harbor staff has confronted my brother about bringing in junk food, such as bread and snacks, and giving it to our mom (Dorothy Carney) or leaving it in her room, where she has unsupervised access to the junk food. The staff at the Douglasville memory care unit and I believe my brother is harming Dorothy Carney by bringing in this outside food, resulting in seven (7) emergency room visits since his arrival.

33.

The diet of a memory care diabetic patient needs to be strictly controlled.

34.

I believe there are several reasons I should be appointed guardian over my brother, to wit:

35.

My mother's clearly stated, written, witnessed, signed, and notarized wish is that I be appointed guardian.

36.

Before Dorothy Carney's medical condition deteriorated to its present level, she granted me POA in front of witnesses and a notary.

37.

It is the stated wishes of my extended family that I be appointed guardian. In my uncle's deposition in this case, he was asked bluntly "who should be the guardian", and he said "me." (Kenneth Carney, MD).

38.

During the Floyd County Probate hearing there was presented sworn testimony by family members supporting me as the guardian.

39.

My brother is somewhat estranged from the family.

40.

Even though Dorothy Carney told me repeatedly that she was afraid of Jerome Carney and that I was to be the sole decision-maker regarding her healthcare, I did not want to act unilaterally, so throughout the years, I tried to have repeated conversations with my brother and to tell him that "It is now time for us to do for our mother what she had to do for her mother." It's time we place her (our Mother) where she can receive 24/7 care. My brother recorded some of these conversations, and my attorney was provided with these recordings during discovery.

41.

My brother, the Petitioner, is adamantly against anything I told him about our Mother's condition. He believes that our Mother, Dorothy Carney, does not have dementia and that "Jeffery has fabricated the diagnosis of her having Dementia". It is clear to everyone else, except Jerome Carney, that our Mother has dementia and can no longer function outside of a memory care facility.

FURTHER AFFIANT SAYETH NOT.

This the 4 day of October, 2024.

Dorothy Jean Carney

Comments:

Good afternoon,

We have a new resident set to move into our Memory Care ward (name: Dorothy Carney) as soon as 1-2 weeks from now. To expedite her transition to our facility, we are needing the following Physician's Medical Evaluation (for Personal Care Home) filled out, signed and faxed back at the number provided. Thank you, and call if there are any issues. [FAX # (706) 236-2505.]

Transcript: March 13, 2021 Telephone Call • Dorothy Carney and Jerome Carney

Jerome Carney: So, how's your day going?

Dorothy Carney: Oh, it's going fine. I just got back from my last walk today.

Jerome Carney: How much have you walked today?

Dorothy Carney: Oh, Lord, Jerome, let's see. I guess altogether I've walked about two hours.

Jerome Carney: My goodness, Mom. If you've just got back in, it may be a good idea to check your sugar. You may need to eat something if you've walked that much.

Dorothy Carney: Well, I'll check it when we get off the phone. I've got plenty of time to eat something. I can tell when it's dropping, Jerome.

Jerome Carney: Okay.

Dorothy Carney: And it's not dropping right now.

Jerome Carney: Okay.

Dorothy Carney: So, how are you today?

Jerome Carney: I'm good. It's Saturday, so I've got the day off, and I'm just enjoying having a little free time. My job keeps me busy, and it's just nice to have a mental break every now and then.

Dorothy Carney: Absolutely.

Jerome Carney: Yeah.

Dorothy Carney: Run away sometimes, Jerome.

Jerome Carney: Oh.

Dorothy Carney: Don't tell them where you are.

Jerome Carney: I'm going to run away from work.

Jerome Carney: Well, you know, I don't know. You know, he comes up once or twice a month, and he does refill your medicine tray, and he'll take you for groceries, and y'all will have a nice day together, and y'all often go down to Bill's and stay, and I'm glad he does that, and I'm glad y'all visit, and...

Dorothy Carney: But how do I get out of doing that with him now, Jerome?

Jerome Carney: Well, no, I would say keep doing that. You know, he's your son, and focus on what you love about him, but just be aware that this is going on. And I would say if he ever asks you to sign anything, don't sign it without me there. That's the main thing, I would say.

Dorothy Carney: I won't. And if he says, well, Jeff can see me, sign it, I'm going to say, no, both of them. Jerome's going to be in on it.

Jerome Carney: Yeah. So that's how I would handle it, Mom. It's just, that's the main thing to be aware of. If he asks you to sign a document, make, get me... Say, yeah, I won't sign it unless Jerome is here, too.

Dorothy Carney: That's right, and I won't, Jerome. Because, you know, I don't know what these documents are about. You would know, and I don't want Jeff making decisions over them. I want you to make a decision. I trust your decision, and that's what I would want.

Jerome Carney: Yeah.

Dorothy Carney: Oh, Lord. Jerome, let me have a prayer, okay?

Jerome Carney: Absolutely, Mom.

Dorothy Carney: Dear Heavenly Father, I come to you in the name of Jesus. He said, what things soever you desire when you pray, believe that you receive them, and you shall have them. Father, you know what the situation is with Jeff. You know Jeff better than we do, Father, and I don't want him making decisions over me. Dear Heavenly Father, please take care of this. Don't let him make any decisions. that's not a good decision that I know about and Jerome knows about. Help me, please, Father. I just don't trust Jeff. I wish that I did, but I do know him, and I just don't trust him. Please keep us safe, dear Heavenly Father. Take care of the situation. In the name of Jesus, I pray. Amen.

Jerome Carney: Yeah, I uh... But you know, I mean, and I know myself, my, about a year ago, right after the pandemic started, my dishwasher broke. And I can't even use the sink in my kitchen because it's on the same plumbing system. So, but luckily, right outside my kitchen, there's a door that goes to my garage and I have a utility sink in my garage. So, and it's a big sink, it's bigger than a normal sink, a lot bigger. And so that's, ever, for the last year, that's where I go to do, to wash my dishes. I just, but I don't wash them every day. I live by myself, so I don't, it doesn't make sense to wash them every day. So I'll let them pile up you, you know, I'll rinse them so that no bugs are gonna get in there, but the actual washing I'll only do every three or four days, when I have enough to do it. And so again, I let my dishes pile up too. But if, if you know Jeff is coming to your house and you have some dishes, I would say go ahead and wash them so he won't complain about that too.

Dorothy Carney: Yeah.

Jerome Carney: I think it's about...

Dorothy Carney: I don't, I just don't trust him anymore, Jerome. I don't... I hate to say this about him, but I don't care where he comes or not, Jerome, because I don't trust him anymore. I'm afraid that anything he does or says is not true, that he's just conniving to get his way about something.

Jerome Carney: Just, yeah, I would, you know, he's your son and you'll always love him and I say, you know, a mother should always welcome her son. But just be careful and the main thing would be about signing a document, you know, that would be the thing I would...

Dorothy Carney: I won't sign nothing. If he asks me to sign a document, I'm gone say the only way I would sign a document, Jeff, is if Jeff and Jerome were here, to see what I was signing.

Jerome Carney: Yeah, yeah, that's that's exactly what I would ask you to do, so...

Dorothy Carney: Because it is, it's, you know, y'all's business if I'm signing something. It will affect y'all too, so I'm not going to sign nothing unless y'all are here, read it and know what it is.

Jerome Carney: Yeah, yeah, just just be a little careful. Again, I'm...

Dorothy Carney: I want to stay here, Jerome. I don't think I would be happy anywhere else. I want to stay right here in this house until God calls me home. Unless I get to where I'm not capable of thinking right and wrong. But Jerome, I want you to be the one that makes the decision on that. I mean, Jeff would say, oh no, she needs to go. She should have gone six months ago. He hates me, Jerome. And you know why he hates me is because of the divorce.

Jerome Carney: Yeah. No, and you know, and you know, that's why you have to be careful too about like, like don't, you know, be, oh, like going up and down steps make sure you hold the railing, because that's how a lot of people, you know, once they're, once they're in their 80s, when they, they'll fall and break a hip, and that's often how they wind up having to go to assisted living. So, you know, be careful about stuff like that, too, and that'll give you your independence, you know.

Dorothy Carney: Yeah, and I'm gonna pray for God to lead and guide me in the direction that he knows is right for me, not what Bill knows or not what, you know, I want it to be God's decision

Jerome Carney: And you...

Dorothy Carney: And God knows me, Jerome. He knows what I'm capable of or not.

Jerome Carney: And some people, you know, some people love [assisted] living. It's, it can be nice. You don't have any responsibility. They clean up after you and they, there's lots of socializing and they have game night and they do little shopping trips.

Dorothy Carney: Yeah, Mae's in there, Jerome.

Jerome Carney: Yeah.

Dorothy Carney: She's in [assisted] living.

Jerome Carney: So, you know, if ever you wanted to move because you said, I'll, you know, that sounds like fun, that sounds like fun for me to go and I would love that. But if, as long as you're saying you would, you want to stay in your home, I want you, I want to support you, so...

RE: Dorothy Jean Carney

Dear Jerome:

As promised, I looked into your concerns regarding you communicating with your Mother. Currently, the Home's medical recommendation is that your calls to your Mother should be limited to every other day for five minutes. I am sure that you find this upsetting, but I am certain if you look at the requirement from your Mother's medical standpoint, the requirement makes perfectly good sense.

Furthermore, your brother will be under the same requirement. And if your and his calls are coordinated properly, your Mother can speak with one of you each day.

I understand that everyone is going through major adjustments right now. And these adjustments require changes from everyone that they were hoping would not have to be made. But the bottom line is the changes had to be made and at this stage of your Mother's life, everything in the future should be viewed through a medical lens as to your Mother's best medical interests.

These adjustments will take time but the adjustments need to start now. I am certain that everyone will adjust very quickly to the Home's protocols and requirements.

Jerome Carney
May 6, 2021
Page 2

As stated above, your Mother can speak with you every other day through the hospital telephone for five minutes. I am certain that, if the call is going well and if the staff has the time, there will be some days that the telephone call can be extended to ten minutes.

One thing that everyone has to realize is that your Mother is on a memory floor. Memory patients require much more attention than patients on an assisted living floor. Their needs are great. Not just from the medical standpoint but from the day-to-day living standpoint.

It is my understanding that the memory floor has eight patients and two care givers. There is simply no way we can reasonably ask the care givers to be available for extended and multiple telephone calls. They simply cannot provide that service and, in fact, they would have to neglect other patients to do so. I am certain that if other patient's family members made demands similar to what you are asking and those demands took time from your Mother, you would be upset. Furthermore, we do not want to be such a burden on the Home to cause them to limit the number of calls that can be made to your Mother.

The care givers have a huge responsibility. And they need to feel that we appreciate them and value their time. Unduly excessive demands and multiple daily interruptions send the wrong message.

Your Mother has entered into a phase of her life, in which she requires substantial attention and monitoring. It is unreasonable for you or your brother to not recognize this undeniable fact.

I am certain that you and your Mother enjoyed lovely telephone calls, but now the telephone calls have to be restricted for your Mother's best interests. A five minute telephone call will still allow you to have a nice chat with your Mother and to say prayers together.

Jerome Carney
May 6, 2021
Page 3

If your Mother's condition changes or improves, we can revisit this at that time. But for now, you only will be able to telephone call your Mother every other day for five minutes. Once you have the time to think about this and focus on your Mother's medical needs, you will understand the wisdom of this requirement.

Remember, you can still contact the Home to check on your Mother. But I urge you to be very considerate and frugal in how you use this privilege.

Please let me know what day you want your telephone calls to start and I will coordinate with your brother and the Home.

With kindest regards.

Sincerely,
GARY BUNCH, P.C.

Category	User	Date	Note
Caregiver	Christal Smith	7/18/2022 5:12 PM	Was noted that resident was up all night. She has been eating well.
RSD (RN) notes	Kim Nations, RN	7/18/2022 4:49 PM	New order to decrease Haloperidol from BID to qd and prn at night
RSM notes	Audrea Burgess	7/17/2022 2:12 PM	Resident has been eating about 50 to 75% of her meals. She has walked around Memory Care today. Chatted with her sister and staff.
Med Tech notes	Rosa Kuss	7/14/2022 11:58 AM	Resident refused morning meal . Resident BG was 43 when checked for lunch .
RSD (RN) notes	Kim Nations, RN	7/14/2022 9:40 AM	spoke with Dr Douglas 7/13/22 at 1825 re: BG of 457 at 5pm. No extra insulin ordered.
RSD (RN) notes	Kim Nations, RN	7/13/2022 5:04 PM	BG 457. Gave max amt insulin per sliding scale. MD office notified. Waiting for return call and orders. Dot is asymptomatic. She ate everything for lunch
Caregiver	Candice Bearden	6/30/2022 4:42 AM	been up since 3am
Med Tech notes	Brittany Worley	6/17/2022 1:29 PM	Resident stated that she had some pain in her left side. I asked if she would like pain medication and she declined. Will continue to monitor.
RSD (RN) notes	Kim Nations, RN	6/16/2022 11:33 AM	Spoke with son, Jeff via phone re: new order for monthly Vit B-12 IM injection. He will administer monthly dose as he is an MD.
Caregiver	Beverly Battles	6/14/2022 9:29 PM	Resident did later let me help her change her brief, and put on pajamas.
Med Tech notes	Hannah DeSalvo	6/10/2022 1:00 AM	AM BG readings hypoglycemic (<60). BG hx faxed to PCP. will f/u PRN
Med Tech notes	Hannah DeSalvo	5/16/2022 12:14 AM	pts hs BG check @ 2115 was 494. rechecked 1h p @ 2215 and BG was 459. POA was called, and refused an ER visit. BG recheck @ 0010 was 321. notified POA of these changes. BGs faxed to PCP. will cont to monitor overnight, and stay in touch c POA. will f/u PRN.
RSM notes	Audrea Burgess	5/1/2022 6:44 PM	Resident has ate like usual today. Ate about 50% of all her meals. Spent time walking around the unit a lot today. Was not exit seeking just walking around said she was exercising. Chatted with her sister.
Med Tech notes	Patricia Wilbanks	4/30/2022 5:15 PM	residents son from California visited all week. very attentive and sweet towards his Mother. spent most of the day with her and ms. dot seemed to enjoy visit very much. was saddened to see him leave.
Med Tech notes	Audrea Burgess	4/24/2022 3:49 PM	Resident has ate well today. She spent time walking around the unit. Sat with her sister at meals and in the common area. Staff brought Jenga game to table to try and engage resident and her sister in game. Resident did try a couple of times with alot of encouragement from staff to play but stated I am not good at this and stated she did not want to play. Even when staff engaged her sister resident still refused to play. Son from out of town came to visit about 3:30pm
Caregiver	Audrea Burgess	3/29/2022 1:28 PM	Resident requested BLT sandwich and chips for lunch. She ate maybe 10% of her meal. Encouraged her to eat her lunch. She stated she was not hungry.
Caregiver	Audrea Burgess	3/24/2022 1:48 PM	Offered to assist her with shower she refused. She seems to be adjusting to her new room. She slept in her bed and not in bed with her sister. She sat with group a little bit. She sat together with her sister and chatted some with her.
Caregiver	Pat Mayes	3/19/2022 2:24 PM	refused her shower
E.D, notes	Sandra Goble, RN	3/15/2022 1:10 PM	meeting with resident's poa Jeff concerning careplan, current level of care, fluctuating bg, care needs. Jeff verbalized understanding and team determined resident will be on trial basis for chopped foods or soft foods sweetened as needed with diabetic sweetener as resident constantly requests "sweets" and refuses 2-3 meals daily unless she is given sweets. see careplan and assessment for current findings.

Med Tech notes	Patricia Wilbanks	3/12/2022 4:45 PM	resident is not eating well
Med Tech notes	Patricia Wilbanks	3/11/2022 1:35 PM	resident became very aggressive and argumentative. refuses to use her walker and will not except any meds
Med Tech notes	Patricia Wilbanks	3/10/2022 11:28 AM	checked sugar early because she has Dr. appointment.
Med Tech notes	Patricia Wilbanks	3/3/2022 5:30 PM	recheck BG34,43,50,82
Med Tech notes	Patricia Wilbanks	3/3/2022 11:30 AM	resident is very agitated today. refused physical therapy and also refuses to use her walker.
Med Tech notes	Rosa Kuss	2/23/2022 4:12 AM	Resident is showing signs of aggressive behavior resident refused all her bed time meds . Resident stated she will talk to her dr when she got home. I Tried to redirect resident and tried to give her meds three times would not redirect for me to allow to give her bedtime meds or allow me to check BG. Resident complained of back pain while i was trying to give her meds tried to give her a PRN along with the meds and she still refused.
Med Tech notes	Patricia Wilbanks	2/19/2022 8:14 AM	resident is showing signs of aggressive behavior. may be due to hip pain from surgery because she has not done this in the past
Caregiver	Hannah DeSalvo	2/17/2022 6:52 AM	res c/o rt hip pain all night, MT notified.
RSD (RN) notes	Joanna Upton	2/15/2022 10:25 AM	Went to residents room this morning to observe the reported swelling in her RLE. Slight swelling noted laterally. Compared her right leg to left and no significant swelling noted, but RLE slightly larger than left. Leg still stained from Betadine scrub prior to surgery. Advised resident to continue to elevate feet as much as she can and reinforced to caregiver as well. Will continue to monitor for edema or change in condition.
Med Tech notes	Patricia Wilbanks	2/12/2022 2:38 PM	resident is agitated and in pain due to hipsurgery.
Med Tech notes	Patricia Wilbanks	2/12/2022 8:05 AM	resident is still having pain in right hip. giving pm oxy but pain is still sharp
E.D, notes	Sandra Goble, RN	2/8/2022 4:24 PM	Resident received PT and OT services at floyd hospital after ambulatory surgical hip repair on 2-4-22 after possible spontaneous hip fx and fall. Resident has walked with supervision and use of rollator today, no change in gait, denies pain and no overt s/s noted. call to pruit hhc who reported they will continue PT and OT tx per HHC. Hospital provided report before pts departure yesterday that there were no limitation in rom nor weight bearing: pt could ambulate/exercise as tolerated. Physician determined therapy could be provided per hhc and would be safer for resident due to dx dementia and anxiety r/t being out of normal environment while at hospital and not being with familiar faces from assisted living and with her sister that also resides in memory care. Pt eating well, no distress, participates in scheduled toileting program with minimal assistance and raised toilet seat provided to assist with rising from toilet.
RSM notes	Audrea Burgess	2/8/2022 10:08 AM	Resident returned from hospital around 7:00pm on 2/7/2022. Resident is ambulatory with a walker
E.D, notes	Sandra Goble, RN	2/3/2022 2:03 PM	Received call from residents son Dr Jeff Carney who reported resident does have a hip fx and is having surgery to repair today. Jeff states it will be an ambulatory surgery and resident will be hospitalized for 3-5 days for therapy and ambulating when discharged, will have hhc services on discharge. discussed level of care and residents functional needs to reside in assisted living: Jeff verbalized understanding and stated resident will be able to ambulate and transfer independently on discharge and return to winthrop. update sent to state per requirements and jeff notified.
Caregiver	Eleanor Callahan	2/3/2022 10:00 AM	resident had a fal this am sent out

Chief Complaint

- Follow-up visit

History Of Present Illness

The patient is a 78 year old Caucasian/White female who is followed for diabetes.

Chronic Medical Conditions

The patient does not check blood sugars at home. The patient has not undergone a recent eye examination, foot check or oral hygiene evaluation. Her most recent HGB A1c was obtained on 11/5/2019 and was 8.3 %. The patient's most recent urine for microalbumin was obtained on 11/5/2019 and was negative for microalbumin. Her bp is elevated today, she has been taking 15 unit of lantus per day, she has also lost wt. she is down to 104. her son Jeff Carney is with her today. He wonders about trying glucerna to gain wt.

Current Complaints

She reports WHAT ARE CURRENT SYMPTOMS.

Compliance with care

The patient states she has been compliant with taking her medications as directed but has been having difficulty complying with the recommended levels of diet and exercise.

Medication History

The patient's medications include Aspirin Low Dose 81 mg oral tablet, delayed release (DR/EC), donepezil 5 mg oral tablet, Lantus Solostar U-100 Insulin 100 unit/mL (3 mL) subcutaneous insulin pen, lisinopril 40 mg oral tablet, memantine 7 mg oral capsule, sprinkle, ER 24hr, and metformin 500 mg oral tablet extended release 24 hr.

Denied symptoms

She denies chest discomfort, fatigue, lower extremity edema, and palpitations.

Recent Visits

The patient has not been seen by any other care providers since the last visit.

Interval Tests & Studies

The patient has not undergone any additional interval lab work, imaging studies or tests since the last visit

Chief Complaint

- Follow-up visit

History Of Present Illness

The patient is a 80 year old Caucasian/White female who is followed for hypertension and diabetes. Her blood pressure has been poorly controlled on the patient's current medications. she is brought in by her son today. He is a trauma urology surgeon at Emory. She lives by herself in Riverside in Celeanese Village. Her brother lives 2 houses down and cooks for he and his wife Betty Bishop 3 meals per day. Betty has been very sick recently and He has also had some health problems and is getting to the point that he can not take care of her and his wife. He is 85 years old. he is responsible for coming in every am and giving Dorothy Carney her medicines and the insulin once per day. he keeps track of meds, checks on her and goes to the grocery for her. she is getting very forgetful and did not remember that she even had a flu shot today. she has not been seen her in one year. she did not remember she had ever been here to this office and did not remember my name. she is dependent on insulin and can be taken off insulin. she went into DKA 2 years ago. she is getting to the point she needs help getting dressed. she can not fix her own meals. If it was not for her brother she could not live by herself. her wt is stable at 108 lbs. she is getting to the point where she needs assistance with dressing, and getting dressed. she has occ urge incontinence. she has 2 sons. One is in Los Angeles and one the surgeon jeff lives in Atlanta. he works all the time. he is a trauma surgeon. she also has a tendency to wander. she used to walk about a mile or so per day and then now if she goes to walk she will get lost in the neighborhood. she can not remember where she was. she can not remember any objects when we do the Mini Mental Status exam. she does not know where she is or what year it is. she does know that she is in Rome and Floyd County. she has not jt aches. she has diabetes mellitus and can not come off of the insulin. she also takes the bp meds. She does not record blood pressures at home.

Current Complaints

She reports none.

Compliance with care

The patient states she has been compliant with taking the medications as directed.

Medication History

The patient's medications include Aspirin Low Dose 81 mg oral tablet,delayed release (DR/EC), Basaglar KwikPen U-100 Insulin 100 unit/mL (3 mL) subcutaneous insulin pen, Contour Next Test Strips miscellaneous strip, donepezil 5 mg oral tablet, lisinopril 40 mg oral tablet, memantine 7 mg oral capsule,sprinkle,ER 24hr, metformin 500 mg oral tablet extended release 24 hr, and Seroquel XR 50 mg oral tablet extended release 24 hr.

Denied symptoms

She denies abdominal pain, bruising easily, chest discomfort, chills, constipation, coughing, diarrhea, difficulty swallowing, dyspnea, fatigue, fever, lightheadedness, lower extremity edema, neck pain, palpitations, syncope, vertigo, and weakness.

Recent Visits

The patient has not been seen by any other care providers since the last visit.

Interval Tests & Studies

The patient has not undergone any additional interval lab work, imaging studies or tests since the last visit

Review of Systems**Constitutional**

- o Denies : body aches, night sweats

Eyes

- o Denies : impaired vision

HENT

- o Denies : headaches, sinus congestion

Breasts

- o Denies : lumps, tenderness, swelling, nipple discharge

Cardiovascular

- o Denies : chest pain, syncope

Respiratory

- o Denies : shortness of breath, wheezing, cough

Gastrointestinal

- o Denies : nausea, vomiting, diarrhea, constipation, blood in stools

Genitourinary

- o Denies : urgency, frequency, dysuria, incontinence

Integument

- o Denies : rash, changes to existing skin lesions or moles

Neurologic

- o **Denies** : muscular weakness, incoordination, tingling or numbness

Musculoskeletal

- o **Denies** : joint pain, muscle pain

Endocrine

- o **Denies** : polyuria, polydipsia, cold intolerance, heat intolerance

Psychiatric

- o **Denies** : anxiety, depression, feeling confused, difficulty sleeping, excessive anger

Heme-Lymph

- o **Denies** : easy bleeding, easy bruising, lymph node enlargement or tenderness

Allergic-Immunologic

- o **Denies** : sinus allergy symptoms, frequent illnesses

Vitals

Physical Examination**Constitutional**

- o **Appearance** : well-nourished, well developed, alert, in no acute distress

Eyes

- o **Conjunctiva/Eyelids** : conjunctiva normal, eyelid appearance normal
- o **Sclera** : sclera white

HENT

- o **Head and Face** :
 - **Head** : normocephalic, atraumatic
 - **Sinuses** : sinuses nontender on palpation
- o **Ears** :
 - **External Ears** : external ears within normal limits
 - **Otoscopy Examination** : tympanic membranes within normal limits
- o **Nose** :
 - **External Nose** : external nose normal in appearance, nares patent, nasal discharge absent
- o **Throat** : oropharynx appearance normal, no lesions present, tonsils present, not inflamed

Neck

- o **Lymph Nodes** : no lymphadenopathy present
- o **Thyroid** : gland size normal, nontender, no nodules or masses present on palpation

Chest

- o **Respiratory Effort** : breathing unlabored
- o **Auscultation** : normal breath sounds, no rales, no rhonchi

Cardiovascular

- o **Heart** :
 - **Auscultation** : regular rate, normal rhythm, no murmurs present
- o **Peripheral Vascular System** :
 - **Peripheral Circulation** : no edema, no cyanosis

Gastrointestinal

- o **Abdominal Examination** : abdomen nontender to palpation, normal bowel sounds, tone normal without rigidity or guarding, no masses present, umbilicus without lesions

Skin

- o **General Inspection** : no rashes present, no lesions present, no areas of discoloration

Common changes in behavior

Many people find the changes in behavior caused by Alzheimer's to be the most challenging and distressing effect of the disease. The chief cause of behavioral symptoms is the progressive deterioration of brain cells. However, medication, environmental influences and some medical conditions also can cause symptoms or make them worse.

In early stages, people may experience behavior and personality changes such as:

- Irritability.
- Anxiety.
- [Depression](#).

In later stages, other symptoms may occur including:

- [Aggression and anger](#).
- [Anxiety and agitation](#).
- General emotional distress.
- Physical or verbal outbursts.
- Restlessness, pacing, shredding paper or tissues.
- [Hallucinations](#) (seeing, hearing or feeling things that are not really there).
- Delusions (firmly held belief in things that are not true).
- [Sleep Issues and sundowning](#).

Triggering situations

Events or changes in a person's surroundings often play a role in triggering behavioral symptoms.

Change can be stressful for anyone and can be especially difficult for a person with Alzheimer's disease. It can increase the fear and fatigue of trying to make sense out of an increasingly confusing world.

Situations affecting behavior may include:

- Moving to a new residence or nursing home.

- Changes in a familiar environment or caregiver arrangements.
- Misperceived threats.
- Admission to a hospital.
- Being asked to bathe or change clothes.

Identifying what has triggered a behavior can often help in selecting the best approach to deal with it.

Medical evaluation for contributing factors

Everyone who develops behavior changes should receive a thorough medical evaluation, especially if symptoms appear suddenly.

Even though the chief cause of behavioral symptoms is the effect of Alzheimer's disease on the brain, an examination may reveal other treatable conditions that are contributing to the behavior.

Contributing conditions may include:

- **Drug side effects.** Many people with Alzheimer's take prescription medications for other health issues. Drug side effects or interactions among drugs can affect behavior.
- **Discomfort from infections or other conditions.** As the disease gets worse, those with Alzheimer's have increasing difficulty communicating with others about their experience. As a result, they may be unable to report symptoms of common illnesses. Pain from infections of the urinary tract, ear or sinuses may lead to restlessness or agitation. Discomfort from a full bladder, constipation, or feeling too hot or too cold also may be expressed through behavior.
- **Uncorrected problems with hearing or vision.** These can contribute to confusion and frustration and foster a sense of isolation.

Difficulty with communication

Because people with Alzheimer's gradually lose the ability to communicate, it's important to regularly monitor their comfort and anticipate their needs.

[Learn More](#)

Non-drug approaches

Non-drug approaches to managing behavior symptoms promote physical and emotional comfort.

Many of these strategies aim to identify and address needs that the person with Alzheimer's may have difficulty expressing as the disease progresses. Non-drug approaches should always be tried first.

Steps to developing successful non-drug treatments include:

- Recognizing that the person is not just "acting mean or ornery," but is having further symptoms of the disease.
- Identifying the cause and how the symptom may relate to the experience of the person with Alzheimer's.
- Changing the environment to resolve challenges and obstacles to comfort, security and ease of mind.

Coping tips

- **Monitor personal comfort.** Check for pain, hunger, thirst, constipation, full bladder, fatigue, infections and skin irritation. Maintain a comfortable room temperature.
- **Avoid being confrontational** or arguing about facts. For example, if a person expresses a wish to go visit a parent who died years ago, don't point out that the parent is dead. Instead, say, "Your mother is a wonderful person. I would like to see her too."
- **Redirect the person's attention.** Try to remain flexible, patient and supportive by responding to the emotion, not the behavior.
- **Create a calm environment.** Avoid noise, glare, insecure space and too much background distraction, including television.
- **Allow adequate rest** between stimulating events.
- **Provide a security object.**
- **Acknowledge requests,** and respond to them.
- **Look for reasons behind each behavior.** Consult a physician to identify any causes related to medications or illness.
- **Explore various solutions.**
- **Don't take the behavior personally,** and share your experiences with others.

Medications for non-cognitive (behavioral and psychological) symptoms

If non-drug approaches fail after being applied consistently, introducing medications may be appropriate for individuals with severe symptoms or who have the potential to harm themselves or others. While prescription medications can be effective in some situations, they must be used carefully and are most effective when combined with non-drug approaches.

Guiding principles

The following general principles can help guide appropriate use of medications:

- **Know the risks and benefits.** It's important to understand the potential benefits and risks of a medication before making treatment decisions.
- **Target a specific symptom.** Effective treatment of one core symptom may help relieve other symptoms. For example, some antidepressants may help people sleep better.
- **Start with a low dose of a single drug and monitor closely for side effects.** Side effects can be serious, and drugs can occasionally even worsen the symptom being treated. Dosage should not be increased without a careful evaluation by a healthcare professional.

FDA-approved medications for individuals living with dementia

The example below represents "on label" use, a medical practice in which a physician may prescribe a drug for a condition that has been approved.

Sleep disturbances

Suvorexant (Belsomra[®]), approved for treatment of insomnia, has been shown to be effective for that purpose in people living with Alzheimer's disease (mild to moderate). It works by blocking the activity of a chemical messenger involved in the sleep-wake cycle.

Agitation

Brexpiprazole (Rexulti[®]) is the only atypical antipsychotic that is FDA-approved for agitation associated with dementia due to Alzheimer's. Atypical antipsychotics are a group of antipsychotic drugs that target the serotonin and dopamine chemical pathways in the brain. Many antipsychotics are used "off label" to treat agitation and other related behaviors. The FDA requires that all atypical antipsychotics carry a safety warning that the medication has been associated with an increased risk of death in older patients with dementia-related psychosis.

Other medications

The examples below represent "off label" use, a medical practice in which a physician may prescribe a drug for a different purpose than the ones for which it is approved.

Antidepressants for low mood and irritability:

- Citalopram (Celexa[®]).
- Fluoxetine (Prozac[®]).
- Paroxetine (Paxil[®]).
- Sertraline (Zoloft[®]).
- Trazodone (Desyrel[®]).

Anxiolytics for anxiety, restlessness, verbally disruptive behavior and resistance:

- Lorazepam (Ativan[®]).
- Oxazepam (Serax[®]).

Antipsychotic medications for hallucinations, delusions, aggression, agitation, hostility and uncooperativeness:

- Aripiprazole (Abilify[®]).
- Clozapine (Clozaril[®]).
- Haloperidol (Haldol[®]).
- Olanzapine (Zyprexa[®]).
- Quetiapine (Seroquel[®]).
- Risperidone (Risperdal[®]).

- Ziprasidone (Geodon®).

Antipsychotic medications

The decision to use an antipsychotic drug needs to be considered with extreme caution. Research has shown that these drugs are associated with an increased risk of stroke and death in older adults with dementia. The FDA has ordered manufacturers to label such drugs with a "black box" warning about their risks and a reminder that they are not approved to treat dementia symptoms.

Based on scientific evidence, as well as governmental warnings and guidance from care oversight bodies, individuals with dementia should use antipsychotic medications only under one of the following conditions:

1. Behavioral symptoms are due to mania or psychosis.
2. The symptoms present a danger to the person or others.
3. The person is experiencing inconsolable or persistent distress, a significant decline in function or substantial difficulty receiving needed care.

Antipsychotic medications should not be used to sedate or restrain persons with dementia. The minimum dosage should be used for the minimum amount of time possible. Adverse side effects require careful monitoring.

Although antipsychotics are the most frequently used medications for agitation, some physicians may prescribe a seizure medication/mood stabilizer, such as:

- Carbamazepine (Tegretol®).

American Geriatrics Society 2023 updated AGS Beers Criteria[®] for potentially inappropriate medication use in older adults

By the 2023 American Geriatrics Society Beers Criteria[®] Update Expert Panel 

Correspondence

Mary Jordan Samuel, American Geriatrics Society, 40 Fulton Street, Suite 809, New York, NY 10038, USA.
Email: msamuel@americangeriatrics.org

Abstract

The American Geriatrics Society (AGS) Beers Criteria[®] (AGS Beers Criteria[®]) for Potentially Inappropriate Medication (PIM) Use in Older Adults is widely used by clinicians, educators, researchers, healthcare administrators, and regulators. Since 2011, the AGS has been the steward of the criteria and has produced updates on a regular cycle. The AGS Beers Criteria[®] is an explicit list of PIMs that are typically best avoided by older adults in most circumstances or under specific situations, such as in certain diseases or conditions. For the 2023 update, an interprofessional expert panel reviewed the evidence published since the last update (2019) and based on a structured assessment process approved a number of important changes including the addition of new criteria, modification of existing criteria, and formatting changes to enhance usability. The criteria are intended to be applied to adults 65 years old and older in all ambulatory, acute, and institutionalized settings of care, except hospice and end-of-life care settings. Although the AGS Beers Criteria[®] may be used internationally, it is specifically designed for use in the United States and there may be additional considerations for certain drugs in specific countries. Whenever and wherever used, the AGS Beers Criteria[®] should be applied thoughtfully and in a manner that supports, rather than replaces, shared clinical decision-making.

KEYWORDS

Beers criteria, Beers list, inappropriate prescribing, medications and drugs, older adults

INTRODUCTION

The Beers Criteria was developed by the late Mark Beers, MD, and colleagues at the University of California Los Angeles in 1991, with the purpose of identifying medications for which potential harm outweighed the expected benefit and that should be avoided in nursing home residents.¹ The 1997 update, led by Dr. Beers, expanded the

criteria to apply to all older adults.² The criteria was updated by an interprofessional group in 2003 and the American Geriatrics Society took over stewardship in 2010. The 2023 American Geriatrics Society (AGS) Beers Criteria[®] (AGS Beers Criteria[®]) for Potentially Inappropriate Medication (PIM) Use in Older Adults is the seventh overall update and fourth since AGS became the criteria's steward. As with previous updates, the AGS and its expert panel have attempted to preserve the spirit and intent of the original Beers Criteria by providing an

Panel Members and Affiliations are provided in Appendix.

TABLE 2 (Continued)

Organ system, therapeutic category, drug(s) ^a	Rationale	Recommendation	Quality of evidence ^b	Strength of recommendation ^b
Digoxin for first-line treatment of atrial fibrillation or heart failure	<p>Use in atrial fibrillation: should not be used as a first-line agent because there are safer and more effective alternatives for rate control.</p> <p>Use in heart failure: evidence for benefits and harms of digoxin is conflicting and of lower quality; most (but not all) evidence concerns use in HFrEF. There is strong evidence for other agents as first-line therapy to reduce hospitalizations and mortality in adults with HFrEF. In heart failure, higher dosages are not associated with additional benefits and may increase the risk of toxicity. Use caution in discontinuing digoxin among current users with HFrEF, given limited evidence suggesting worse clinical outcomes after discontinuation.</p> <p>Decreased renal clearance of digoxin may lead to an increased risk of toxic effects; further dose reduction may be necessary for those with Stage 4 or 5 chronic kidney disease.</p>	<p>Avoid this rate control agent as first-line therapy for atrial fibrillation.</p> <p>Avoid as first-line therapy for heart failure. See rationale for caution about withdrawal in long-term users with HFrEF.</p> <p>If used for atrial fibrillation or heart failure, avoid dosages >0.125 mg/day.</p>	Atrial fibrillation; heart failure: low Dosage > 0.125 mg/day: moderate	Strong
Central nervous system				
Antidepressants with strong anticholinergic activity, alone or in combination Amitriptyline Amoxapine Clomipramine Desipramine Doxepin >6 mg/day Imipramine Nortriptyline Paroxetine	Highly anticholinergic, sedating, and cause orthostatic hypotension; the safety profile of low-dose doxepin (≤ 6 mg/day) is comparable to that of placebo.	Avoid	High	Strong
Antiparkinsonian agents with strong anticholinergic activity Benztropine (oral) Trihexyphenidyl	Not recommended for prevention or treatment of extrapyramidal symptoms due to antipsychotics; more effective agents available for the treatment of Parkinson disease.	Avoid	Moderate	Strong
Antipsychotics, first- (typical) and second- (atypical) generation Aripiprazole Haloperidol Olanzapine Quetiapine Risperidone Others ^d	Increased risk of stroke and greater rate of cognitive decline and mortality in persons with dementia. Additional evidence suggests an association of increased risk between antipsychotic medication and mortality independent of dementia.	Avoid, except in FDA-approved indications such as schizophrenia, bipolar disorder, Parkinson disease psychosis (see Table 3), adjunctive treatment of major depressive disorder, or for short-term use as an antiemetic.	Moderate	Strong

clinical conditions and in special circumstances such as when a once-daily DOAC is necessary to facilitate medication adherence, and that all DOACs have a lower risk of intracranial hemorrhage than warfarin.

Warfarin has been added to Table 2 as a medication to be avoided when starting initial therapy for VTE or nonvalvular atrial fibrillation unless alternatives (e.g., DOACs) are contraindicated or there are substantial barriers to the use of an alternative. The distinction between starting warfarin as initial therapy versus maintaining warfarin among current long-term users (especially those with well-controlled international normalized ratio [INR] levels) reflects different evidence for these scenarios as well as considerations of shared decision-making. The AGS is concerned that there are significant barriers to the use of newer alternatives including high out-of-pocket drug costs and formulary restrictions. These barriers could lead to inequitable access to DOACs that may be safer for older adults. We urge policymakers, insurers, and organizations in the pharmaceutical supply chain to ensure that out-of-pocket costs and access restrictions are not a barrier to safe and effective anticoagulation for all of us as we age. AGS and the expert panel recognize that cost and access will continue to be a factor in individualized decision-making between warfarin and DOACs and among different DOACs until payment policies are enacted that support equitable access for all individuals regardless of their economic and insurance status. The recommendation for dabigatran remains as “use with caution” for the long-term treatment of nonvalvular atrial fibrillation and VTE (Table 4) because of evidence suggesting an increased risk of gastrointestinal and major bleeding compared with alternatives such as apixaban.

Another change from the 2019 criteria pertains to the initiation and continuation of estrogen in postmenopausal women. The initiation of oral and transdermal estrogen is to be avoided in older women; topical vaginal estrogen remains appropriate for its major indications of symptomatic vaginal atrophy or urinary tract infection prophylaxis. Deprescribing should be considered for older women already using nonvaginal estrogen replacement. The recommendation for sulfonylureas has been expanded to avoid all sulfonylureas as first- or second-line monotherapy or add on-therapy in recognition of their association with a higher risk of cardiovascular events, all-cause mortality, and hypoglycemia than alternative choices. Here the panel recognizes there may be substantial barriers to or pressures opposing the recommendation, including financial ones, with similar considerations as those discussed above for anticoagulants. If a sulfonylurea must be used, then a short-acting agent is preferred because of the higher risk of prolonged hypoglycemia with longer-acting

sulfonylureas (e.g., glimepiride, chlorpropamide, or glyburide, which is also known as glibenclamide).

Changes to the criteria involving PIMs exacerbating specific drug diseases and drug syndromes (Table 3) are relatively minimal. The combination of dextromethorphan/quinidine was added to the list of drugs to avoid in patients with heart failure. In the criterion of PIMs to avoid in older adults with a history of falls or fractures, the level of evidence for antidepressants has been lowered to “moderate.” Modifications and clarifications were made to the criteria for delirium, dementia, and Parkinson disease, including adding opioids to the list of drugs that can exacerbate delirium. The update continues to stress the need to avoid antipsychotics and other medications for behavioral problems of dementia and delirium as their use is frequently associated with harm and increased during and after pandemic lockdowns.¹⁴⁻¹⁶ The use of behavioral interventions and search for modifiable triggers for behavior^{14,17} remains the preferred management strategy and should be clearly documented in the health record. The use of antipsychotics and other medications listed in these criteria should be a last resort in collaboration and with the use of shared decision-making with older adults and their care partners. Many evidence-based approaches for behavior in persons with dementia are now available including the Describe, Investigate, Create, Evaluate (DICE) approach and others.^{18,19} We remind readers that the AGS Beers Criteria® do not apply to care in hospice and at the end of life, in which setting decision-making about these and other drugs may require other considerations.

As mentioned above, the criteria for aspirin and rivaroxaban have been moved from Table 4 to Table 2. Ticagrelor has been added to the criterion about prasugrel, advising that it be used with caution, particularly among adults 75 years old and older because of concerns of major bleeding. A new criterion was added advising that sodium-glucose co-transporter-2 (SGLT2) inhibitors be used with caution because of the increased risk of urogenital infection and euglycemic diabetic ketoacidosis, and recommends monitoring early during treatment. Of note, the panel recognizes the value of SGLT2-inhibitors but also wishes to emphasize that patients taking these drugs should be monitored actively for possible adverse effects.

The panel worked to clarify and consolidate the clinically important drug–drug interactions (Table 5), most notably the use of multiple agents with anticholinergic activity, the concurrent use of ≥ 3 CNS-active drugs from specific therapeutic categories (which now include skeletal muscle relaxants), and the addition of SSRIs to the list of warfarin drug–drug interactions.

Behavioral Disorders in Dementia: Appropriate Nondrug Interventions and Antipsychotic Use

TYLER R. REESE, MD; DERRICK J. THIEL, MD; and KATHERINE E. COCKER, DO, *Tripler Army Medical Center, Honolulu, Hawaii*

Behavioral and psychological symptoms of dementia pose management challenges for caregivers and clinicians. First-line nonpharmacologic treatments include eliminating physical and emotional stressors, modifying the patient's environment, and establishing daily routines. Family members and caregivers benefit from education about dementia symptoms and reminders that the behaviors are normal and unintentional. Cognitive and emotion-oriented interventions, sensory stimulation interventions, behavior management techniques, and other psychosocial interventions are modestly effective. In refractory cases, physicians may choose to prescribe off-label antipsychotics. Aripiprazole has the most consistent evidence of symptom improvement; however, this improvement is small. Olanzapine, quetiapine, and risperidone have inconsistent evidence of benefit. Physicians should use the smallest effective dose for the shortest possible duration to minimize adverse effects, most notably an increased mortality risk. Other adverse effects include anticholinergic and antidopaminergic effects, extrapyramidal symptoms, neuroleptic malignant syndrome, postural hypotension, metabolic syndrome, cardiac arrhythmia, and sedation. Patients should be monitored for these effects while receiving treatment; however, laboratory monitoring may be limited to patients receiving long-term therapy. (*Am Fam Physician*. 2016;94(4):276-282. Copyright © 2016 American Academy of Family Physicians.)

► **Patient information:** A handout on this topic is available at <http://www.aafp.org/afp/2016/0815/p276-s1.html>.

Behavioral and psychological symptoms of dementia pose management challenges for caregivers and clinicians. Although nondrug therapy is effective, Medicare drug claims in 14% of nursing home residents included atypical (second-generation) antipsychotic medication use for treating symptoms of dementia.¹ This off-label use of antipsychotics occurs despite a U.S. Food and Drug Administration (FDA) boxed warning noting an increased risk of death when antipsychotics are used in patients with dementia-related psychosis.² Because the estimated number of U.S. adults with dementia was 3.4 million in 2002 and is projected to double by 2025, primary care physicians should be familiar with nonpharmacologic management of dementia-related symptoms and with the effectiveness and risks of antipsychotic medications before initiating off-label use.³⁻⁵

Symptoms of Dementia

Approximately 15% to 75% of persons with dementia have delusions, delusional

misidentifications, hallucinations (usually visual), wandering, agitation, aggression, and other psychotic behaviors.⁶ Collectively, these symptoms are referred to as behavioral and psychological symptoms of dementia. These symptoms contribute to caregiver fatigue and burnout, which often influence the decision to seek out-of-home care. These symptoms are often indicative of underlying emotional distress, pain, delirium, or physical discomforts, which can be treated supportively. Family and caregivers benefit from education about current and anticipated dementia symptoms and reminders that the behaviors are normal and unintentional.

Nonpharmacologic Management

The American Geriatrics Society and American Association for Geriatric Psychiatry consider nonpharmacologic interventions first-line treatment for behavioral and psychological symptoms of dementia.⁷ Physicians should assess for potential underlying causes of the concerning behaviors. Clinicians and caregivers should evaluate and treat physical discomforts such as thirst, hunger,

pain, toileting difficulties, or nausea.⁸ Sleep deprivation, fatigue, depression, loneliness, boredom, overstimulation, and social stressors may serve as emotional triggers.⁷ Physical and emotional symptoms can be treated by establishing routines for toileting, eating, medication administration, sleep, and socialization. If routines do not correct the behaviors and safety concerns remain, physical barriers to wandering may be necessary.

Behaviors that are not corrected with environmental measures may respond to more extensive interventions⁷ (Table 1⁷⁻¹¹). The strength of supporting evidence for these interventions varies, but in general, they have been associated with no more than modest benefits.

Cognitive and emotion-oriented interventions include cognitive stimulation, reminiscence therapy, simulated presence therapy, and validation therapy. Cognitive stimulation includes regularly scheduled mentally stimulating activities.¹⁰ During reminiscence therapy, the patient engages with another person or group in remembering past activities, events, or experiences.⁹ In simulated presence therapy, audio or audiovisual recordings are played to mimic the presence of a loved one. Validation therapy involves acknowledging the patient's current emotional state or voiced wishes and may include redirection from the unwanted behavior.

Sensory stimulation interventions include acupuncture, aromatherapy, light therapy, massage, and music therapy. Behavior management techniques include extinction and differential reinforcement. Extinction is withholding of positive reinforcement during inappropriate behavior. Differential reinforcement rewards quiet behavior or actions that are incompatible with the inappropriate behavior. Reinforcements can include social reinforcement, touch, food, and pleasurable activities.¹² Other psychosocial interventions include animal-assisted therapy and exercise.¹⁰

Appropriate Antipsychotic Use and Safety

PRESCRIBING GUIDELINES

Antipsychotics are often used to treat refractory or severe behavioral and psychological symptoms of dementia, although the FDA has not approved this use because of low-quality evidence of benefit and good-quality evidence of harm.^{1,2} If first-line, nonpharmacologic therapies are ineffective, physicians should consider the risks and benefits of initiating off-label antipsychotic medications. Clinicians should initiate treatment only if the behaviors pose a risk of harm to the patient or others (e.g., hitting, verbal assaults, dangerous wandering) or if they are severely debilitating and other resources have been exhausted.¹³ Medication should

At its December 2015 meeting, The APA Board of Trustees approved the APA Practice Guideline Writing Group's "Practice Guideline on the Use of Antipsychotics to Treat Agitation or Psychosis in Patients With Dementia." [The full guideline is available at <http://psychiatryonline.org/doi/book/10.1176/appi.books.9780890426807>]

INTRODUCTION

The goal of this guideline is to improve the care of patients with dementia who are exhibiting agitation or psychosis. More specifically, this guideline focuses on the judicious use of antipsychotic medications when agitation or psychosis occurs in association with dementia and does not review evidence for or focus on other pharmacological interventions. The guideline is intended to apply to individuals with dementia in all settings of care as well as to care delivered by generalist and specialist clinicians. Recommendations regarding treatment with antipsychotic medications are not intended to apply to individuals who are receiving antipsychotic medication for another indication (e.g., chronic psychotic illness) or individuals who are receiving an antipsychotic medication in an urgent context.

Expert consensus suggests that use of an antipsychotic medication in individuals with dementia can be appropriate, particularly in individuals with dangerous agitation or psychosis, and can minimize the risk of violence, reduce patient distress, improve patient's quality of life, and reduce caregiver burden. However, in clinical trials, the benefits of antipsychotic medications are at best small (Corbett et al., 2014; Kales et al., 2015) whether assessed through placebo-controlled trials, head-to-head comparison trials, or discontinuation trials. There is also consistent evidence that antipsychotics are associated with clinically significant adverse effects, including mortality. Consequently, decisions about the treatment of psychosis or agitation in an individual with dementia will be an outgrowth of the initial assessment and an understanding of the goals and preferences of the patient (if clinically feasible) and the patient's surrogate decision maker (if relevant) with input from family or others involved with the patient. Such decisions will also need to balance the potential benefits and harms of a particular

intervention as compared to other therapeutic options for the individual patient. The full text of the practice guideline includes a detailed description of expert consensus findings and research evidence related to effects of antipsychotic medication in individuals with dementia. It also describes aspects of guideline implementation that are relevant to individual patients' circumstances and clinical presentation.

Overview of the Development Process

Since the 2011 publication of the Institute of Medicine report, *Clinical Practice Guidelines We Can Trust*, there has been an increasing focus on using clearly defined, transparent processes for rating the quality of evidence and the strength of the overall body of evidence in systematic reviews of the scientific literature. This guideline was developed using a process intended to be consistent with the recommendations of the Institute of Medicine (2011), the Principles for the Development of Specialty Society Clinical Guidelines of the Council of Medical Specialty Societies (2012) and the requirements of the Agency for Healthcare Research and Quality (AHRQ) for inclusion of a guideline in the National Guidelines Clearinghouse. Parameters used for the guidelines' systematic review are included with the full text of the guideline; the development process is fully described in the following document available on the American Psychiatric Association (APA) website: <http://www.psychiatry.org/File%20Library/Psychiatrists/Practice/Clinical%20Practice%20Guidelines/Guideline-Development-Process.pdf>. To supplement the expertise of members of the guideline work group, we used a "snowball" survey methodology (Yager 2014) to identify experts on the treatment of agitation or psychosis in individuals with dementia. Results of this expert survey are included in the Appendix of the full practice guideline.

Rating the Strength of Research Evidence and Recommendations

The guideline recommendations are rated using GRADE (Grading of Recommendations Assessment, Development and Evaluation), which is used by multiple professional organizations around the world to develop practice guideline recommendations

(Guyatt et al., 2013). With the GRADE approach, the strength of a guideline statement reflects the level of confidence that potential benefits of an intervention outweigh the potential harms (Andrews et al., 2013). This level of confidence is informed by available evidence, which includes evidence from clinical trials as well as expert opinion and patient values and preferences. Evidence for the benefit of a particular intervention within a specific clinical context is identified through systematic review and is then balanced against the evidence for harms. In this regard, harms are broadly defined and might include direct and indirect costs of the intervention (including opportunity costs) as well as potential for adverse effects from the intervention. Whenever possible, we have followed the admonition to current guideline development groups to avoid using words such as “might” or “consider” in drafting these recommendations as they can be difficult for clinicians to interpret (Shiffman et al., 2005).

As described under Guideline Development Process, each final rating is a consensus judgment of the authors of the guideline and is endorsed by the APA Board of Trustees. A “recommendation” (denoted by the numeral 1 after the guideline statement) indicates confidence that the benefits of the intervention clearly outweigh harms. A “suggestion” (denoted by the numeral 2 after the guideline statement) indicates uncertainty (i.e., the balance of benefits and harms is difficult to judge, or either the benefits or the harms are unclear). Each guideline statement also has an associated rating for the “strength of supporting research evidence.” Three ratings are used—high, moderate, and low (denoted by the letters A, B, and C, respectively)—and reflect the level of confidence that the evidence for a guideline statement reflects a true effect based on consistency of findings across studies, directness of the effect on a specific health outcome, and precision of the estimate of effect and risk of bias in available studies (Agency for Healthcare Research and Quality 2014; Balshem et al., 2011; Guyatt et al., 2006).

It is well recognized that there are guideline topics and clinical circumstances for which high quality evidence from clinical trials is not possible or is unethical to obtain (Council of Medical Specialty Societies, 2012). For example, many questions need to be asked as part of an assessment and inquiring about a particular symptom or element of the history cannot be separated out for study as a discrete intervention. It would also be impossible to separate changes in outcome due to assessment from changes in outcomes due to ensuing treatment. Research on psychiatric assessments and some psychiatric interventions can also be complicated by multiple confounding factors such as the interaction between the clinician and the patient or the patient’s unique circumstances and experiences. For these and other reasons, many topics covered in this guideline have relied on forms of evidence such as consensus opinions of experienced clinicians or indirect findings from observational studies rather than being based on research from randomized trials. The GRADE working group and guidelines developed by other professional organizations have noted that a strong recommendation may be appropriate even in the absence of research evidence when

sensible alternatives do not exist (Andrews et al., 2013; Brito et al., 2013; Djulbegovic et al., 2009; Hazlehurst et al., 2013).

Proper Use of Guidelines

The APA Practice Guidelines are assessments of current scientific and clinical information provided as an educational service. The guidelines 1) should not be considered as a statement of the standard of care or inclusive of all proper treatments or methods of care; 2) are not continually updated and may not reflect the most recent evidence, as new evidence may emerge between the time information is developed and when the guidelines are published or read; 3) address only the question(s) or issue(s) specifically identified; 4) do not mandate any particular course of medical care; 5) are not intended to substitute for the independent professional judgment of the treating provider; and 6) do not account for individual variation among patients. As such, it is not possible to draw conclusions about the effects of omitting a particular recommendation, either in general or for a specific patient. Furthermore, adherence to these guidelines will not ensure a successful outcome for every individual, nor should these guidelines be interpreted as including all proper methods of evaluation and care or excluding other acceptable methods of evaluation and care aimed at the same results. The ultimate recommendation regarding a particular assessment, clinical procedure, or treatment plan must be made by the clinician in light of the psychiatric evaluation, other clinical data, and the diagnostic and treatment options available. Such recommendations should be made in collaboration with the patient, whenever possible, and incorporate the patient’s personal and sociocultural preferences and values in order to enhance the therapeutic alliance, adherence to treatment, and treatment outcomes. For all of these reasons, APA cautions against the use of guidelines in litigation. Use of these guidelines is voluntary. APA provides the guidelines on an “as is” basis, and makes no warranty, expressed or implied, regarding them. APA assumes no responsibility for any injury or damage to persons or property arising out of or related to any use of the guidelines or for any errors or omissions.

GUIDELINE STATEMENTS

Assessment of Behavioral/Psychological Symptoms of Dementia

Statement 1. APA recommends that patients with dementia¹ be assessed for the type, frequency, severity, pattern, and timing of symptoms. (1C)

Statement 2. APA recommends that patients with dementia be assessed for pain and other potentially modifiable contributors to symptoms as well as for factors, such as the subtype of dementia, that may influence choices of treatment. (1C)

¹Throughout this guideline, we use the term *dementia*, which was used in the evidence that was considered in developing these recommendations. These recommendations are also meant to apply to individuals with major neurocognitive disorder, as defined in the American Psychiatric Association’s *Diagnostic and Statistical Manual of Mental Disorders, 5th ed.* (DSM–5).

Statement 3. APA recommends that in patients with dementia with agitation or psychosis, response to treatment be assessed with a quantitative measure. (1C)

Development of a Comprehensive Treatment Plan

Statement 4. APA recommends that patients with dementia have a documented comprehensive treatment plan that includes appropriate person-centered nonpharmacological and pharmacological interventions, as indicated. (1C)

Assessment of Benefits and Risks of Antipsychotic Treatment for the Patient

Statement 5. APA recommends that nonemergency antipsychotic medication should only be used for the treatment of agitation or psychosis in patients with dementia when symptoms are severe, are dangerous, and/or cause significant distress to the patient. (1B)

Statement 6. APA recommends reviewing the clinical response to nonpharmacological interventions prior to non-emergency use of an antipsychotic medication to treat agitation or psychosis in patients with dementia. (1C)

Statement 7. APA recommends that before nonemergency treatment with an antipsychotic is initiated in patients with dementia, the potential risks and benefits from antipsychotic medication be assessed by the clinician and discussed with the patient (if clinically feasible) as well as with the patient's surrogate decision maker (if relevant) with input from family or others involved with the patient. (1C)

Dosing, Duration and Monitoring of Antipsychotic Treatment

Statement 8. APA recommends that if a risk/benefit assessment favors the use of an antipsychotic for behavioral/psychological symptoms in patients with dementia, treatment should be initiated at a low dose to be titrated up to the minimum effective dose as tolerated. (1B)

Statement 9. APA recommends that if a patient with dementia experiences a clinically significant side effect of antipsychotic treatment, the potential risks and benefits of antipsychotic medication should be reviewed by the clinician to determine if tapering and discontinuing of the medication is indicated. (1C)

Statement 10. APA recommends that in patients with dementia with agitation or psychosis, if there is no clinically significant response after a 4-week trial of an adequate dose of an antipsychotic drug, the medication should be tapered and withdrawn. (1B)

Statement 11. APA recommends that in a patient who has shown a positive response to treatment, decision making about possible tapering of antipsychotic medication should be accompanied by a discussion with the patient (if clinically feasible) as well as with the patient's surrogate decision maker (if relevant) with input from family or others involved with the patient. The aim of such a discussion is to elicit their preferences and concerns and to review the initial goals, observed benefits and side effects of antipsychotic treatment, and potential risks of continued exposure to antipsychotics,

as well as past experience with antipsychotic medication trials and tapering attempts. (1C)

Statement 12. APA recommends that in patients with dementia who show adequate response of behavioral/psychological symptoms to treatment with an antipsychotic drug, an attempt to taper and withdraw the drug should be made within 4 months of initiation, unless the patient experienced a recurrence of symptoms with prior attempts at tapering of antipsychotic medication. (1C)

Statement 13. APA recommends that in patients with dementia whose antipsychotic medication is being tapered, assessment of symptoms should occur at least monthly during the taper and for at least 4 months after medication discontinuation to identify signs of recurrence and trigger a reassessment of the benefits and risks of antipsychotic treatment. (1C)

Use of Specific Antipsychotic Medications, Depending on Clinical Context

Statement 14. APA recommends that in the absence of delirium, if nonemergency antipsychotic medication treatment is indicated, haloperidol should not be used as a first-line agent. (1B)

Statement 15. APA recommends that in patients with dementia with agitation or psychosis, a long-acting injectable antipsychotic medication should not be utilized unless it is otherwise indicated for a co-occurring chronic psychotic disorder. (1B)

AUTHOR AND ARTICLE INFORMATION

From the APA Practice Guideline Writing Group (Victor I. Reus, M.D., Chair). Address correspondence to Karen Kanefield (kkanefield@psych.org).

APA wishes to acknowledge the contributions of APA staff (Seung-Hee Hong, Karen Kanefield, Kristin Kroeger Ptakowski, and Samantha Shugarman, M.S.) and former APA staff (Robert Kunkle, M.A.). APA and the Guideline Writing Group especially thank Laura J. Fochtmann, M.D., M.B.I., Seung-Hee Hong and Robert Kunkle, M.A. for their outstanding work and effort on developing this guideline. APA also thanks the APA Steering Committee on Practice Guidelines (Michael Vergare, M.D., Chair), liaisons from the APA Assembly for their input and assistance, and APA Councils and others for providing feedback during the comment period. Thanks also go to those individuals who completed the Expert Consensus Survey.

Rx only

WARNING

Increased Mortality in Elderly Patients with Dementia-Related Psychosis: Elderly patients with dementia-related psychosis treated with antipsychotic drugs are at an increased risk of death. Analyses of seventeen placebo-controlled trials (modal duration of 10 weeks), largely in patients taking atypical antipsychotic drugs, revealed a risk of death in drug-treated patients of between 1.6 to 1.7 times the risk of death in placebo-treated patients. Over the course of a typical 10-week controlled trial, the rate of death in drug-treated patients was about 4.5%, compared to a rate of about 2.6% in the placebo group. Although the causes of death were varied, most of the deaths appeared to be either cardiovascular (e.g., heart failure, sudden death) or infectious (e.g., pneumonia) in nature. Observational studies suggest that, similar to atypical antipsychotic drugs, treatment with conventional antipsychotic drugs may increase mortality. The extent to which the findings of increased mortality in observational studies may be attributed to the antipsychotic drug as opposed to some characteristic(s) of the patients is not clear. Haloperidol is not approved for the treatment of patients with dementia-related psychosis (see **WARNINGS**).

DESCRIPTION

Haloperidol is the first of the butyrophenone series of major tranquilizers. The chemical designation is 4-[4-(*p*-chlorophenyl)-4-hydroxypiperidino]-4'-fluorobutyrophenone. It has the following structural formula.

Each haloperidol tablet, USP intended for oral administration contains haloperidol, USP 5 mg or 10 mg or 20 mg. In addition each tablet contains the following inactive ingredients: calcium stearate, dibasic calcium phosphate dihydrate, povidone (PVP K 30), sodium starch glycolate and starch. **5 mg:** D & C Yellow #10 Aluminum Lake and FD & C Blue #1 Aluminum Lake; **10 mg:** D & C Yellow #10 Aluminum Lake and FD & C Blue #1 Aluminum Lake; **20 mg:** FD & C Yellow #6 Aluminum Lake and D & C Red #27 Aluminum Lake.

CLINICAL PHARMACOLOGY

The precise mechanism of action has not been clearly established.

INDICATIONS AND USAGE

HIGHLIGHTS OF PRESCRIBING INFORMATION

These highlights do not include all the information needed to use SEROQUEL XR safely and effectively. See full prescribing information for SEROQUEL XR. SEROQUEL XR® (quetiapine fumarate) extended-release tablets, for oral use
Initial U.S. Approval: 1997

WARNING: INCREASED MORTALITY IN ELDERLY PATIENTS WITH DEMENTIA-RELATED PSYCHOSIS; and SUICIDAL THOUGHTS AND BEHAVIORS
See full prescribing information for complete boxed warning.

Increased Mortality in Elderly Patients with Dementia-Related Psychosis

- Elderly patients with dementia-related psychosis treated with antipsychotic drugs are at an increased risk of death. SEROQUEL XR is not approved for elderly patients with dementia-related psychosis. (5.1)

Suicidal Thoughts and Behaviors

- Increased risk of suicidal thoughts and behavior in children, adolescents and young adults taking antidepressants. (5.2)
- Monitor for worsening and emergence of suicidal thoughts and behaviors. (5.2)

----- **RECENT MAJOR CHANGES** -----

Warnings and Precautions, Leukopenia, Neutropenia and Agranulocytosis (5.10)	11/2018
Warnings and Precautions, Anticholinergic (antimuscarinic) Effects (5.20)	11/2018

----- **INDICATIONS AND USAGE** -----

SEROQUEL XR is an atypical antipsychotic indicated for the treatment of:

- Schizophrenia (1.1)
- Bipolar I disorder, manic or mixed episodes (1.2)
- Bipolar disorder, depressive episodes (1.2)
- Major depressive disorder, adjunctive therapy with antidepressants (1.3)

----- **DOSAGE AND ADMINISTRATION** -----

- Swallow tablets whole and do not split, chew or crush (2.1)
- Take without food or with a light meal (approx. 300 calories) (2.1)
- Administer once daily, preferably in the evening (2.1)
- Geriatric Use:* Consider a lower starting dose (50 mg/day), slower titration, and careful monitoring during the initial dosing period in the elderly. (2.3, 8.5)
- Hepatic Impairment:* Lower starting dose (50 mg/day) and slower titration may be needed (2.4, 8.7, 12.3)

Indication	Initial Dose	Recommended Dose	Maximum Dose
Schizophrenia - Adults (2.2)	300 mg/day	400-800 mg/day	800 mg/day
Schizophrenia - Adolescents (13 to 17 years) (2.2)	50 mg/day	400-800 mg/day	800 mg/day
Bipolar I Disorder manic or mixed - Acute monotherapy or adjunct to lithium or divalproex - Adults (2.2)	300 mg/day	400-800 mg/day	800 mg/day
Bipolar I Disorder, manic Acute monotherapy - Children and Adolescents (10 to 17 years) (2.2)	50 mg/day	400-600 mg/day	600 mg/day
Bipolar Disorder, Depressive Episodes - Adults (2.2)	50 mg/day	300 mg/day	300 mg/day

Major Depressive Disorder, Adjunctive Therapy with Antidepressants - Adults (2.2)	50 mg/day	150-300 mg/day	300 mg/day
---	-----------	----------------	------------

----- **DOSAGE FORMS AND STRENGTHS** -----

Extended-Release Tablets: 50 mg, 150 mg, 200 mg, 300 mg, and 400 mg (3)

----- **CONTRAINDICATIONS** -----

Known hypersensitivity to SEROQUEL XR or any components in the formulation. (4)

----- **WARNINGS AND PRECAUTIONS** -----

- Cerebrovascular Adverse Reactions:** Increased incidence of cerebrovascular adverse reactions (e.g., stroke, transient ischemic attack) has been seen in elderly patients with dementia-related psychoses treated with atypical antipsychotic drugs (5.3)
- Neuroleptic Malignant Syndrome (NMS):** Manage with immediate discontinuation and close monitoring (5.4)
- Metabolic Changes:** Atypical antipsychotics have been associated with metabolic changes. These metabolic changes include hyperglycemia, dyslipidemia, and weight gain (5.5)
 - Hyperglycemia and Diabetes Mellitus:** Monitor patients for symptoms of hyperglycemia including polydipsia, polyuria, polyphagia, and weakness. Monitor glucose regularly in patients with diabetes or at risk for diabetes
 - Dyslipidemia:** Undesirable alterations have been observed in patients treated with atypical antipsychotics. Appropriate clinical monitoring is recommended, including fasting blood lipid testing at the beginning of, and periodically, during treatment
 - Weight Gain:** Gain in body weight has been observed; clinical monitoring of weight is recommended
- Tardive Dyskinesia:** Discontinue if clinically appropriate (5.6)
- Hypotension:** Use with caution in patients with known cardiovascular or cerebrovascular disease (5.7)
- Increased Blood Pressure in Children and Adolescents:** Monitor blood pressure at the beginning of, and periodically during treatment in children and adolescents (5.9)
- Leukopenia, Neutropenia and Agranulocytosis:** Monitor complete blood count frequently during the first few months of treatment in patients with a pre-existing low white cell count or a history of leukopenia/neutropenia and discontinue SEROQUEL XR at the first sign of a decline in WBC in absence of other causative factors (5.10)
- Cataracts:** Lens changes have been observed in patients during long-term quetiapine treatment. Lens examination is recommended when starting treatment and at 6-month intervals during chronic treatment (5.11)
- Anticholinergic(antimuscarinic) Effects:** Use with caution with other anticholinergic drugs and in patients with urinary retention, prostatic hypertrophy, constipation, or increased intraocular pressure (5.20).

----- **ADVERSE REACTIONS** -----

Most common adverse reactions (incidence ≥5% and twice placebo):
Adults: somnolence, dry mouth, constipation, dizziness, increased appetite, dyspepsia, weight gain, fatigue, dysarthria, and nasal congestion (6.1)
Children and Adolescents: somnolence, dizziness, fatigue, increased appetite, nausea, vomiting, dry mouth, tachycardia, weight increased (6.1)
To report SUSPECTED ADVERSE REACTIONS, contact AstraZeneca at 1-800-236-9933 or FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.

----- **DRUG INTERACTIONS** -----

- Concomitant use of strong CYP3A4 inhibitors:** Reduce quetiapine dose to one sixth when coadministered with strong CYP3A4 inhibitors (e.g., ketoconazole, ritonavir) (2.5, 7.1, 12.3)
- Concomitant use of strong CYP3A4 inducers:** Increase quetiapine dose up to 5 fold when used in combination with a chronic treatment (more than 7-14 days) of potent CYP3A4 inducers (e.g., phenytoin, rifampin, St. John's wort) (2.6, 7.1, 12.3)
- Discontinuation of strong CYP3A4 inducers:** Reduce quetiapine dose by 5 fold within 7-14 days of discontinuation of CYP3A4 inducers (2.6, 7.1, 12.3)

Systematic review

ABSTRACT

Background: Sedation is a common side effects of antipsychotic medication. It is poorly defined but is generally understood to encompass excessive daytime sleepiness, difficulty thinking or concentrating, and oversleeping. Sedation is often cited as impacting on functioning and wellbeing, however no review to date has assessed this relationship.

Aims of review: This review aims to explore the impact of the sedating side effects of antipsychotic medication on patient functioning and wellbeing.

Methods: Papers were identified by searching the databases PubMed, PsycINFO, EBSCO, CINAHL, and Clarivate Web of Science. A narrative synthesis and quality appraisal was conducted.

Results: Eleven peer reviewed papers met the eligibility criteria. Sedation was often identified as the most common side effect, but was not uniformly defined. Results consistently supported a negative effect of sedation on functioning (e.g. ability to perform day-to-day tasks and motivation). With respect to wellbeing, a negative impact of sedation was identified on quality of life and anhedonia, but less consistent interactions with other domains (e.g. anxiety), with few papers reporting on these links.

Conclusion: Despite the plausible impact of sedation on patients being widely discussed, there is surprisingly little empirical research in this area. The research that exists broadly supports a negative impact of sedation on functioning and wellbeing, although there are some complexities requiring further investigation, and many domains (e.g. interaction with mood) have not been substantively investigated. Sedation may be an important adverse side effect that is relevant to consider in improving recovery from psychosis.

1. Introduction

Sedation is one of the most common side effects reported from antipsychotic medication and is generally understood to comprise symptoms of excessive sleep duration, difficulty concentrating, and/or excessive daytime sleepiness. A recent meta-analysis of RCTs estimated that 25 % of patients have persistent sedation from antipsychotics (Nomura et al., 2025), although rates vary widely based on medication type, dosing, and patient population and can be significantly higher – for example, 46–49 % of patients on clozapine sleep for 10 h or more each day (Cederlöf et al., 2024; Fernandez-Egea et al., 2021). Sedation is often acknowledged to have a range of impacts on patients – particularly in increasing likelihood of non-adherence to antipsychotic medication (Lambert et al., 2004). However, other impacts are indicated or plausible. For example, another large cohort study indicated that long sleep

duration amongst patients with psychosis was linked with reduced exercise and higher likelihood of being overweight (Dong et al., 2025), indicating that sedation is worth considering in the context of concerns over cardiovascular risk in psychosis (Osimo et al., 2023). Yet sedation has been underacknowledged to date in research and clinical practice, including in comparison to other side-effects from antipsychotic medication such as weight gain or movement disorders (Chakrabarti, 2025).

One reason for a lack of attention may be inconsistency in definition. In some cases sedation is taken to mean excessive sleepiness or extended sleep duration (sometimes referred to as somnolence), and in others it is attributed as more of a cognitive concern (e.g. difficulty concentrating) (DiBonaventura et al., 2012). Sedation may be challenging to differentiate from fatigue, negative symptoms, or low mood -which are all common amongst patients with psychosis (Hartley et al., 2013; Waters et al., 2013). There is also a risk that sedation may be easily overlooked -

May 25 2021 8:17AM	hcarpenter	Dr. Douglas faxed over prescription for basaglar and novolog with directions. Spoke with Tammy O'Neil and confirmed rx directions on the phone per verbal from Dr. Douglas. Tammy asked if the patient could eat a protein bar every night at bedtime. Per verbal from Dr. Douglas, that is okay, since the bars that she eats have 1g total sugar and 0g added sugars. Tammy verbalized understanding.
May 21 2021 8:38AM	hcarpenter	We did not rec. a fax yet with the patients blood sugar logs. I called Winthrop Court and spoke with Cassie, the front desk manager, and she states that Tammy is not in yet this morning. Cassie states that she will send Tammy a message with our correct fax number and have those logs faxed over as soon as Tammy gets there today. Tammy O'Neil states that they have increased the patient insulin again. The nurse is getting some 49 and 71 bs readings before meals. They are giving her a base dose of 8 units of novolog plus the sliding scale. She just wanted to know if you have a parameter that you do not want them to give the patient the base 8 units of novolog plus sliding scale? The patient is taking Basaglar 36 units daily, Novolog 8 units plus sliding scale TID, and metformin ER 500mg 2 po qd. Please advise. (I asked Tammy to fax us the patients most recent blood sugar log, so she is going to fax that over.) She states that the patients blood sugar will be 500 one day, and then 50 the next. Please advise. #706-236-2500 (She knows that Dr. Douglas isn't here on Thursdays, but she wanted to go ahead and call to get the message to him in the morning.)

RE: In re: Dorothy Jean Bishop Carney; Floyd County Probate Court;
Estate Number 22E30670

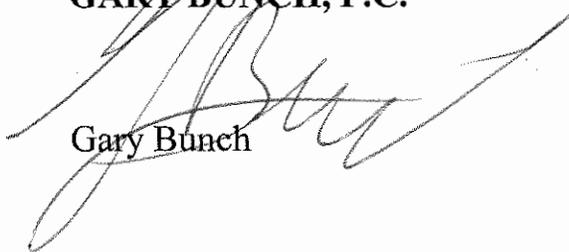

Dear Counsel:

We are scheduled for a mediation, of a long pending wrongful death case, the first week of August . In addition, Dr. Carney has travel plans to go to California with his niece to attend the wedding of her brother, who is his nephew, that week.

Therefore, we request that the trial, in the above referenced action, be continued to a later date. Will consent to a continuance?

With best regards.

Sincerely,
GARY BUNCH, P.C.

Gary Bunch

**K. JEFF CARNEY, M.D., PHARMD'S MEMORANDUM IN SUPPORT
OF HIS MOTION TO CONTINUE THE TRIAL
SCHEDULED TO BE HELD AUGUST 1, 2022**

A.

INTRODUCTION

K. Jeff Carney, MD, PharmD, ("Dr. Carney"), Dorothy Jean Bishop Carney's ("Mrs. Carney") oldest son, moves to continue the trial for the appointment of a guardian and conservator for Mrs. Carney scheduled to be held August 1, 2022. Good grounds support Dr. Carney's motion and the requested continuance will not harm Mrs. Carney. Accordingly, the motion should be granted.

B.

THERE ARE LEGITIMATE REASONS FOR THE REQUESTED CONTINUANCE AND THE REQUESTED CONTINUANCE WILL NOT HARM MRS. CARNEY

Dr. Carney's counsel is scheduled for a mediation, of a long pending wrongful death case, the first week of August (R. Bruce Van Meter, for the wrongful death of his wife Kristin Van Meter v. Elisha J. Poynter, M.D., In Compass Health, Inc., and 24 On Physicians, PC. (Civil Action No: 19CV01237, Floyd County Superior Court.)

In addition, Dr. Carney, the first week of August, has travel plans with air transportation tickets purchased to go to California to attend his nephew's wedding, which has been planned for more than a year. Dr. Carney's niece, who lives with Dr. Carney, plans to travel with Dr. Carney to her brother's wedding.

The focus of the proceeding for the appointment of a guardian and conservator is the best interest of Mrs. Carney. And the requested continuance will not harm Mrs. Carney.

Dr. Carney and his brother have filed cross petitions of guardianship and conservatorship. Both acknowledge that Mrs. Carney needs a guardian and conservator. The only question is who should be appointed as Mrs. Carney's guardian and conservator.

Mrs. Carney is currently residing at Winthrop Memory Care and doing extremely well. Mrs. Carney's sister, also, resides at Winthrop Memory Care. Mrs. Carney enjoys being with her sister.

In addition, Mrs. Carney's diabetes, because of the excellent care that she is receiving, is under the best control that it has been for years. Mrs. Carney's A1C (which measures blood sugar levels) is the best it has been since she was diagnosed with Diabetes.

Moreover, an appointment of a guardian would not change Mrs. Carney's current living arrangements. Dr. Carney, through his Power of Attorney, selected Winthrop Memory Care for Mrs. Carney and does not want her to be moved. And opposing Petitioner Jerome Carney (Mrs. Carney's other son) has no intention, if appointed guardian, to move Mrs. Carney.

And the slight delay in the appointment of a conservator will not prejudice Mrs. Carney. Dr. Carney has paid more than half of Mrs. Carney's living expenses at Winthrop Memory Care. In addition, Dr. Carney pays for Mrs. Carney's medications, insulin, diabetic test strips, glucose monitor and adult diapers, which are essential for Mrs. Carney's health and well being. And Dr. Carney pays for Mrs. Carney's other personal day-to-day needs. Moreover, Dr. Carney always ensures that Mrs. Carney's bills are paid on time.

Opposing Petitioner Jerome Carney has no objection to Dr. Carney's handling of Mrs. Carney's finances.

Q: Do you have any objection with regard to how your brother has handled your mother's finances?

A: The little information I've seen, I haven't seen anything I would object to at this point.

(Jerome Carney's deposition, page 122, lines 16-21).

C.

CONCLUSION

For the foregoing reasons, Dr. Carney's motion to continue the trial scheduled for August 1, 2022 should be granted.

Tardive Dyskinesia

Authors

Sarayu Vasan¹; Ranjit K. Padhy².

Affiliations

¹ UCLA - Kern Medical

² UCLA - Kern Medical

Last Update: April 24, 2023.

Continuing Education Activity

Tardive dyskinesia is a syndrome that includes a group of iatrogenic movement disorders caused by the blockade of dopamine receptors. The movement disorders include akathisia, dystonia, buccolingual stereotypy, myoclonus, chorea, tics, and other abnormal involuntary movements, which are commonly caused by the long-term use of typical antipsychotics. However, several other medications are also associated with tardive dyskinesia. The Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM V) defines tardive dyskinesia as a medication-induced movement disorder that persists despite discontinuation or change of the medications. As per DSM-V, to confirm a diagnosis of tardive dyskinesia, symptoms must persist for a month after discontinuation of the drug. This activity reviews tardive dyskinesia and highlights the role of the interprofessional team in recognizing and managing patients affected by this condition.

Objectives:

- Review the pathophysiology of tardive dyskinesia.
- Describe exam findings consistent with tardive dyskinesia.
- Outline management strategies for tardive dyskinesia.
- Summarize strategies to educate interprofessional teams on common etiologies of tardive dyskinesia as well as common presentations so that efforts can be made to prevent it from developing in the first place and stop it from progressing if it has already developed.

[Access free multiple choice questions on this topic.](#)

Introduction

Tardive dyskinesia (TD) is a syndrome that encompasses a constellation of iatrogenic movement disorders caused by the antagonism of dopamine receptors. The movement disorders include akathisia, dystonia, buccolingual stereotypy, chorea, tics, and other abnormal involuntary movements. Most often, these dyskinetic disorders precipitate following chronic antipsychotic administration; however, several other medications are also associated with tardive dyskinesia. The Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM 5) defines tardive dyskinesia as a medication-induced movement disorder that persists despite discontinuation or change of the medications. As per DSM-5, to confirm a diagnosis of tardive dyskinesia, symptoms must persist for at least one month after discontinuation of the medication.[1][2][3]

Tardive dyskinesia is most common in people with schizophrenia and bipolar patients treated with antipsychotic medications but can occur in the setting of any disorder. In addition, the medications that precipitate tardive dyskinesia can also induce Parkinsonian symptoms. Although the precise pathogenesis continues to elude researchers, data suggest that tardive dyskinesia is induced by aberrant dopamine transporters.

Etiology

Tardive dyskinesia is caused due to long-term exposure to first and second-generation neuroleptics, certain antidepressants, lithium, and some antiemetic medications. Typically, first-generation antipsychotics with increased dopamine D2 receptor affinity are affiliated with a higher risk of inducing tardive dyskinesia. Atypical antipsychotics have been associated with a decreased tardive dyskinesia diathesis--as well as fewer extrapyramidal side effects compared to typical antipsychotics--due to their lower affinity for dopamine D2 receptors in the dorsal striatum and concomitant blockade of serotonin 5-HT_{2A/2C} receptors.[4][5]

Metoclopramide can also cause tardive dyskinesia, especially in older individuals. The condition may also occur with certain antihistamines, amoxapine, and fluoxetine.

Epidemiology

The average prevalence of tardive dyskinesia is estimated at least 20% of all patients treated with first-generation neuroleptics. However, other medications responsible for tardive dyskinesia have been less studied, and published data indicate a prevalence ranging from 1% to 10%. Women risk developing tardive dyskinesia more than men, especially in middle-aged to senior patients. Post-menopausal women have incidence rates as high as 30% after almost a year of exposure to antipsychotic medications, suggesting estrogen may have an antioxidant effect protecting against tardive dyskinesia. Elderly patients are more likely to develop tardive dyskinesia due to age-related changes in the brain and body. Several studies indicate African Americans are more likely to develop tardive dyskinesia after long-term exposure to dopamine-blocking agents than White-race individuals.[6]

Other factors increasing tardive dyskinesia diathesis include the duration of exposure to the neuroleptic agent, the manifestation of EPS, and using first-generation antipsychotics instead of second-generation antipsychotics. Of note, the long-term use of anticholinergic medications may increase the risk of tardive dyskinesia.

Pathophysiology

First-generation antipsychotics bind more tightly to dopamine D2 receptors in comparison to second-generation antipsychotics, and for this reason, typical antipsychotics have a higher tendency to cause tardive dyskinesia. Some evidence suggests the presence of extrapyramidal symptoms during neuroleptic treatment predicts the development of tardive dyskinesia. In addition to dopamine, the other neurotransmitter receptors that may be involved in causing tardive dyskinesia include 5-hydroxytryptophan receptors found in the striatum. These receptors interact with dopaminergic neurons and are considered to be involved in regulating motor activity.

Upregulation of dopamine receptors due to chronic dopamine blockade can result in an exaggerated response to the postsynaptic receptors to dopamine, causing tardive dyskinesia. Another hypothesis is the resulting oxidative stress due to antidepressants blocking dopamine receptors, which causes an increase in dopamine metabolism, and this subsequently results in free radical production. The consequential oxidative stress on the basal ganglia--striatum and substantia nigra--results in the manifestation of tardive dyskinesia. Evidence also suggests that antipsychotic medications and their metabolites can also be directly toxic to neurons through oxidative stress. It is known that removing the agent that causes tardive dyskinesia can exacerbate the symptoms, and this is defined as withdrawal dyskinesia. It is theorized that this is due to dopamine D2 receptor upregulation and postsynaptic receptor super sensitivities. However, this does not explain why tardive dyskinesia remains for many years after the offending drug has been discontinued.[3]

History and Physical

Physicians should examine all patients for any movement disorders before initiating treatment with dopamine D2 receptor antagonists. Tardive dyskinesia presents clinically as stereotypical involuntary movements of the tongue, neck, and facial muscles, truncal musculature, and limbs. Buccolingual movements, including masticatory muscles, are characterized by lip-smacking, tongue protrusion, perioral movements, chewing movements, or a puffing of cheeks. Sometimes, these movements may be hard to distinguish from stereotype posturing seen in chronic psychotic patients. However, tardive dyskinesia is seen in patients with chronic exposure to dopamine D2 receptor blockade.

The onset of tardive dyskinesia is insidious and can be difficult to distinguish as the nascent stages demonstrate only subtle deviant motion. Tardive dyskinesia can manifest as early as 1 to 6 months following the initiation of a

dopamine receptor antagonist. Diagnosis of acute or chronic dyskinesias may be challenging without a careful history. A thorough history of movement disorders and medication history will aid in diagnosing tardive dyskinesia accurately.

Specific conditions that can occur with anti-dopaminergic agents include:

- Tardive akathisia
- Tardive orofacial dyskinesia
- Tardive dystonia
- Tardive blepharospasm
- Tardive tics

Evaluation

Numerous rating scales determine the presence and severity of tardive dyskinesia. The most widely used instrument is the Abnormal Involuntary Movement Scale (AIMS). It is recommended to administer the AIMS at baseline before initiating antipsychotic medications, with a follow-up screening performed no longer than three months later. Upon evaluation of the patient, it can be noted that tardive dyskinesia is present at rest and somewhat diminished when there is any form of volitional movement. For example, tongue dyskinesias reduce when the patient is asked to protrude their tongue.

If tardive dyskinesia is present in conjunction with dementia, one should consider Huntington disease, Wilson disease, or a central nervous system tumor. A diagnosis of antipsychotic-induced tardive dyskinesia is made after the symptoms have persisted for at least one month and required exposure to neuroleptics for at least three months. Tardive dyskinesia should be distinguished from withdrawal dyskinesias as these most likely remit soon after the termination of the antipsychotic.

Workup for tardive dyskinesia may include selected laboratory studies and imaging. Typically, brain CT and MRI are normal in patients with tardive dyskinesia. However, they may assist in ruling out other conditions such as Huntington disease, where atrophy of the caudate nucleus is seen, and Fahr syndrome, where calcification is noted in the basal ganglia.^{[1][5][7]}

Treatment / Management

Dopamine receptor antagonists should be avoided whenever possible by selecting other medications that have a lower potential to cause tardive dyskinesia. Furthermore, chronic use of first-generation antipsychotics should be avoided whenever possible. To date, treatment options remain sparse. The American Academy of Neurology only recommends a few treatment options, which include clonazepam and ginkgo biloba. Valbenazine, a vesicular monoamine transport type 2 (VMAT2) inhibitor, was approved by the FDA on April 11, 2017, to treat tardive dyskinesia. The KINECT 3 trial results revealed valbenazine improved tardive dyskinesia when compared to the placebo drug. However, the best treatment option is primary prevention.^{[8][9][10]}

Differential Diagnosis

- Chorea
- Complex seizure
- Essential tremor
- Tourette syndrome
- Tic disorder
- Wilson disease

- Sydenham chorea

Prognosis

Unfortunately, tardive dyskinesia is considered a chronic and unremitting disorder. Nothing has yet been proven to resolve tardive dyskinesia, but as mentioned previously, supportive measures can attenuate the severity.

Complications

Tardive dyskinesia is primarily a progressive disturbance that causes unmeasurable discomfort and potential embarrassment. Fortunately, it is generally not life-threatening. However, severe tardive dyskinesia of the larynx and diaphragm may prove fatal.

Consultations

- Ophthalmologist to assess the eye for Wilson disease
- Neurologist
- Movement disorder specialist
- Psychiatrist consult

Deterrence and Patient Education

The best means of obviating tardive dyskinesia is primary prevention. Primary prevention of tardive dyskinesia includes using the lowest effective dose of an antipsychotic agent for the shortest period possible. If tardive dyskinesia develops, it is recommended to decrease the dose or even discontinue the offending agent and switch to clozapine. Clozapine is recommended in patients with tardive dyskinesia who continue to require antipsychotics, as the incidence of tardive dyskinesia with clozapine is significantly less than with other antipsychotics.

Enhancing Healthcare Team Outcomes

The diagnosis and management of tardive dyskinesia are best made with an interprofessional team. In most cases, the primary clinician may suspect the diagnosis during follow-up. It is crucial to consult collaboratively with a pharmacist as part of the interprofessional team approach to managing the medication profile for patients who have developed tardive dyskinesia or are at risk for developing the condition.

Movement disorders like tardive dyskinesias are frequently aggravated by the use of drugs that block dopamine. In susceptible patients, even a single dose of an anti-dopaminergic drug can quickly develop disabling movement disorders. Thus, besides the clinician, the role of the pharmacist is critical. Patients vulnerable to tardive dyskinesia include people with schizophrenia and those with developmental disabilities who may develop the movement disorder when administered a dopamine blocking agent. The pharmacist must note these patients and with which medications they are treated. The caregiver should be informed about the possibility of this adverse effect and the alternatives. Nurses can also monitor the patients for symptomatic improvement or decline and immediately report their observations to the prescriber and/or pharmacist to enact appropriate therapeutic interventions.

Clinicians should be advised not to start such medications if there are other options. Plus, the pharmacist must educate the patient about wearing an alert bracelet that warns against the administration of such drugs. Once the patient is started on neuroleptic, close monitoring is essential because with early diagnosis, the drug may be discontinued or the dose lowered to prevent full-blown tardive dyskinesia.[11][12] [Level 5]

Outcomes

Data on the management of tardive dyskinesia are inconsistent and difficult to understand. Some studies show an improvement when the antipsychotic drug is decreased in dose or discontinued, and other studies show no change. Long-term studies suggest that tardive dyskinesia persists in at least 10% to 30% of patients. Recent studies show that

Akathisia

Last Update: July 24, 2023.

Continuing Education Activity

Akathisia is a neuropsychiatric syndrome that can occur as an adverse effect of antipsychotic medications and manifests as psychomotor restlessness. In recent years, akathisia has additionally been found to occur in certain individuals as an adverse effect of with calcium channel blockers, antiemetics, anti-vertigo drugs, cocaine, and sedatives used in anesthesia. This activity reviews the evaluation and management of akathisia and highlights the role of the interprofessional team in the recognition and management of this condition.

Objectives:

- Review the pathophysiologic basis of akathisia.
- Outline the expected history and physical findings for a patient with akathisia.
- Identify the treatment options available for akathisia.
- Explain the interprofessional team strategies for improving care coordination and communication for patients with akathisia.

[Access free multiple choice questions on this topic.](#)

Introduction

Akathisia is defined as an inability to remain still. It is a neuropsychiatric syndrome that is associated with psychomotor restlessness. The individual with akathisia will generally experience an intense sensation of unease or an inner restlessness that usually involves the lower extremities. This results in a compulsion to move. In most cases the movement is repetitive. The individual may cross, uncross, swing, or shift from one foot to the other. To the observer, this may appear as a persistent fidget.[1][2][3]

Akathisia is a movement disorder that may be associated with the use of antipsychotic medications. The primary movement disorders from antipsychotic agents are akathisia, acute dystonia, pseudoparkinsonism, and tardive dyskinesia. Akathisia may also rarely occur with antidepressant agents.

Akathisia may appear soon after the antipsychotic has been started or may appear when the dosage is increased.

In recent years, akathisia has also been known to be associated with calcium channel blockers, antiemetics, anti-vertigo drugs, and sedatives used in anesthesia. Akathisia has also been noted to occur following abuse of cocaine. The condition may be acute or chronic, with symptoms often lasting many months or even years.

Etiology

The exact etiology of akathisia is unknown, but it is thought to be due to antipsychotic agents blocking dopamine type-2 receptors in the brain. [4]

The general belief is that there is an imbalance between cholinergic/dopaminergic or serotonergic/dopaminergic systems. The organ where this imbalance occurs is most likely the shell of the nucleus accumbens.

Epidemiology

The incidence varies widely. The occurrence of akathisia is higher with first-generation, or typical, antipsychotics, particularly, high-potency agents such as haloperidol than with the second-generation, or atypical, antipsychotics.[5]

Pathophysiology

The pathophysiology of akathisia is poorly understood. Extrapyramidal side effects, particularly acute dystonia and pseudoparkinsonism, are thought to be due to an imbalance of dopamine and acetylcholine in the nigrostriatal pathway of the brain induced by antipsychotic agents blockade of dopamine type-2 receptors. Dystonia and pseudoparkinsonism are often managed with concomitant anticholinergic agents such as benztropine. Akathisia is also observed with antipsychotic agents which block dopamine type-2 receptors, and this supports the notion that it is also linked to diminished dopamine transmission in the brain. However, akathisia does not generally respond to anticholinergic agents, suggesting an alternative pathophysiologic mechanism.

History and Physical

Patients presenting with akathisia typically have recently started an antipsychotic agent, or their dose has been increased. Akathisia usually develops within the first 2 weeks of antipsychotic therapy. There are subjective and objective components to akathisia. Patients will typically describe a feeling of restlessness with a desire to move. Additionally, patients will be objectively seen manifesting that restlessness by pacing, rocking, and shifting position. Patients with akathisia often feel distressed and uncomfortable.

To assess the severity of akathisia, health care professionals may use tools like the Barnes Akathisia Rating Scale (BARS).

Providers should be aware that inner restlessness often causes extreme anxiety and dysphoria in the individual. In chronic cases, akathisia has also been associated with a high risk of self-harm or suicidal behavior; therefore, the clinician should obtain a history of depression, anxiety, and suicidal ideations.

Evaluation

The Barnes Akathisia Rating Scale may be used to assess patients with akathisia. However, most clinicians will rely on clinical observation. There are no relevant laboratory or radiographic tests involved in the diagnosis of akathisia. [6][7]

Treatment / Management

Antipsychotic-induced akathisia may be managed by reducing the dose of the offending agent or switching to an alternative antipsychotic agent. Beta-blockers such as propranolol and benzodiazepines have historically been used for the treatment of akathisia although the amount of high-quality data supporting their use is limited. Anticholinergic agents such as benztropine may be utilized if concomitant pseudoparkinsonism is present. Mirtazapine may also be utilized for the management of akathisia. Low-dose mirtazapine has been found to be as effective as beta-blockers and may be considered first-line therapy. However, one should use caution with this agent, because there are reports that high doses of mirtazapine may worsen akathisia.[3][8][9]

When using beta-blockers, clinicians should be aware of the risk of bradycardia and hypotension.

Many other agents, including vitamin B6, have been used to treat akathisia, but there are no randomized controlled trials to determine their efficacy.

Differential Diagnosis

Akathisia is often underdiagnosed because its symptoms often mimic or overlap other psychiatric disorders like psychosis, mania, attention deficit hyperactivity disorder (ADHD), or agitated depression. Thus, it is important to obtain a complete medical history and rule out other psychiatric disorders.

Prognosis

Prognosis is good if the condition is recognized and the drug causing it is discontinued. If the condition is left untreated, it has high morbidity and can even lead to suicidal ideations.

Complications

Akathisia can be disabling and leads to disability if not recognized. Many people with the condition develop severe anxiety and dysphoria. Reports even exist of suicidal ideations in these patients.

Consultations

Once the diagnosis of akathisia is made, the patient should be referred to a neurologist and a psychiatrist. Making decisions on the medications can be tricky since most patients rely on antipsychotics for their mental health conditions.

Deterrence and Patient Education

The drug regimen may have to be altered or the dose of the drug reduced to stop akathisia.

Pearls and Other Issues

Akathisia is defined as an inability to remain still. It is a neuropsychiatric syndrome that is associated with psychomotor restlessness.

The individual with akathisia will generally experience an intense sensation of unease or an inner restlessness that usually involves the lower extremities-this results in a compulsion to move. In most cases the movement is repetitive.

Akathisia is a movement disorder that may be associated with the use of antipsychotic medications. The primary movement disorders from antipsychotic agents are akathisia, acute dystonia, pseudoparkinsonism, and tardive dyskinesia. Akathisia may also rarely occur with antidepressant agents.

It may be difficult to determine whether a patient is experiencing akathisia or anxiety or agitation. Early identification and management are important as akathisia may be associated with treatment nonadherence.

Antipsychotic-induced akathisia may be managed by reducing the dose of the offending agent or switching to an alternative antipsychotic agent.

Beta-blockers such as propranolol and benzodiazepines have historically been used for the treatment of akathisia although the amount of high-quality data supporting their use is limited.

Anticholinergic agents such as benztropine may be utilized if concomitant pseudoparkinsonism is present.

Enhancing Healthcare Team Outcomes

For the most part, akathisia is associated with the use of antipsychotic medications. Once the movement disorder has

Jerome Carney
jeromecarney@yahoo.com

RE: Dorothy Jean Carney

Dear Jerome:

Your brother was notified by Winthrop Memory Care's staff around 7:30 am Thursday morning that your mother had fallen and likely broken her right hip.

Your brother used his physician contacts in Rome to expedite her care.

Your mother arrived at the emergency room at 8:30 am. X-rays were performed promptly. And at 9:24 am the diagnosis of a transcervical fracture of the right proximal femur was confirmed.

At 10:11 am, your brother spoke with the orthopedic surgeon who was to perform the surgery, and at 10:30 am he spoke with the anesthesiologist responsible for providing anesthesia during your mother's surgery.

Your mother was taken into surgery at 11:55 am which was approximately only three hours after falling.

The surgery started at 12:22 pm and finished at 1:01 pm. Your mother was awakened from anesthesia and taken to the recovery area at 1:22 pm.

Due to the type of her fracture, your mother only required a "partial" hip replacement. Your brother says that, contrary to popular belief, a partial hip replacement is a very minor surgery only requiring about 30 minutes.

Jerome Carney
February 4, 2022
Page 2

Although many patients ambulate and go home the day after a “partial” hip replacement surgery, the plan for your mother is to keep her in the hospital until Monday or Tuesday next week. This additional time will enable Winthrop and the home healthcare agency time to coordinate your mother's post-op care and obtain the new medications she will need after discharge.

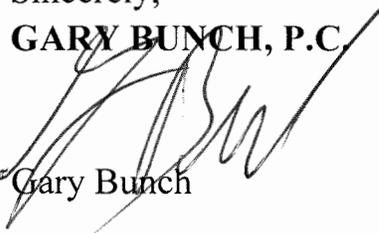

Your mother will NOT need to go to a rehab hospital. Your brother already has arranged for your mother to receive her prescribed physical therapy, durable medical supplies and required rehab at Winthrop Memory Care.

Your brother, also, wants you to know that your mother’s blood glucose, with the escalation of her insulin therapy, is under much better control. Your mother’s blood glucose was 130 when she arrived at the hospital yesterday, and her HGBA1C was 7.9. Your brother states that represents a remarkable improvement from her value of >13 when placed into the memory care unit.

Your brother says that Aunt Mae really misses your mother and is eager for her return next week.

Lastly, your brother said to tell you that he loves you with his whole heart.

With kindest regards.

Sincerely,
GARY BUNCH, P.C.

Gary Bunch

Drugs and Falls in Older People: A Systematic Review and Meta-analysis: I. Psychotropic Drugs

Rosanne M. Leipzig, MD, PhD,* Robert G. Cumming, MBBS, MPH, PhD,† and Mary E. Tinetti, MD‡

OBJECTIVES: To evaluate critically the evidence linking psychotropic drugs with falls in older people.

DESIGN: Fixed-effects meta-analysis.

DATA SOURCES: English-language articles in MEDLINE (1966 - March 1996) indexed under *accidents* or *accidental falls* and *aged* or *age factors*; bibliographies of retrieved papers.

STUDY SELECTION: Systematic evaluation of sedative/hypnotic, antidepressant, or neuroleptic use with falling in people aged 60 and older.

DATA EXTRACTION: Study design, inclusion and exclusion criteria, setting, sample size, response rate, mean age, method of medication verification and fall assessment, fall definition, and the number of fallers and non-fallers taking specific classes of psychotropic drugs.

RESULTS: Forty studies, none randomized controlled trials, met eligibility criteria. For one or more falls, the pooled odds ratio (95% confidence interval) was 1.73 (95%CI, 1.52-1.97) for any psychotropic use; 1.50 (95%CI, 1.25-1.79) for neuroleptic use; 1.54 (95%CI, 1.40-1.70) for sedative/hypnotic use; 1.66 (95%CI, 1.4-1.95) for any antidepressant use (mainly TCAs); 1.51 (95%CI, 1.14-2.00) for only TCA use; and 1.48 (95%CI, 1.23-1.77) for benzodiazepine use, with no difference between short and long acting benzodiazepines. For neuroleptics in psychiatric inpatients, the pooled OR was 0.41 (95%CI, 0.21-.82); for all other patients, the pooled OR was 1.66 (95%CI, 1.38-2.00). Comparing ≥ 1 with ≥ 2 falls, mean subject age < 75 versus ≥ 75 years old, communities with $< 35\%$ versus $\geq 35\%$ fallers, or subject place of residence did not affect the pooled OR. Increased falls occurred in patients taking more than one psychotropic drug.

CONCLUSION: There is a small, but consistent, association between the use of most classes of psychotropic drugs and falls. The evidence to date, however, is based solely on observational data, with minimal adjustment for confound-

ers, dosage, or duration of therapy. The incidence of falls and their consequences in this population necessitate that future large randomized controlled trials of any medication in older persons should measure falls prospectively as an adverse outcome event. *J Am Geriatr Soc* 47:30-39, 1999.

Both psychotropic drug use and falls are common in older persons. Approximately 30% of community-dwelling people older than 65 years of age fall every year; in nursing home patients the incidence can approach 50%.^{1,2} Injury, fear of falling with subsequent restriction of activities and socialization, and family concern resulting in institutionalization are among the consequences of falls in this age group.³ Several risk factors for falls in older people have been identified, but none is as potentially preventable or reversible as medication use. Although studies have suggested that psychotropic medications are often prescribed inappropriately to older people,⁴⁻⁸ many older persons might benefit from treatment were it not for the potential adverse effects.⁹ Despite numerous studies, it is unclear whether the use of psychotropic drugs is a risk factor for falls in older people.^{10,11} The direction, magnitude, and statistical significance of the associations are not consistent from study to study, possibly because of the small number of subjects taking psychotropic drugs as well as the differences in drug classification in each study. Psychotropic drugs are often analyzed as a single class, and published results often do not differentiate among the major classes of psychotropic drugs, i.e., antidepressants, neuroleptics, and sedative/hypnotics, or among pharmacological subgroups or individual agents.

In this meta-analysis, each study was critically evaluated for its ability to assess validly the relationship between drug use and falls. By combining the results from several studies, meta-analysis can increase the number of subjects taking each drug class and provide a more precise answer to the question: "Is there an association between use of antidepressants, neuroleptics, sedative/hypnotics, or combinations of these drugs with falls in older people, and, if so, how strong is the association?"

METHODS

Study Identification

Abstract

Objective: To carry out meta-analyses on psychotropic drugs and to provide an update of the risk of falling in the elderly people related to psychotropic drugs. **Design:** Meta-analyses of studies on psychotropic drugs. **Results:** 177 studies are included, of which 71 have data on risk factors associated with psychotropic drugs. The odds ratio and 95% CI for associations between use of psychotropic drugs and fall are 1.78 and 1.57-2.01, respectively. This result is statistically heterogeneous. This heterogeneity disappears in the group of very old participants for each class. **Conclusion:** Our study confirms the association between falls in the elderly people and psychotropic

This case is now in a different county with a new judge, different attorneys representing each of the two parties competing for the appointment of guardianship and conservatorship and a newly appointed attorney for the proposed Ward. On August 16, 2023 this Court held a status conference that led to the drafting of this order. Having reviewed this order, this court finds no reason to refuse its entry.

III. Prior Orders in Same Case

This Court is bound by any of the orders entered by the Probate Court of Floyd County; however, this Court may exercise its discretion in vacating or amending such Orders should it choose to do so. This court recognizes that a court “should be cautious about overruling prior orders of another judge in the same case;” however, in the “exercise of sound discretion,” a prior order may be vacated if this court “is convinced that such action is dictated by the interests of justice” so long as such action is “based on sound legal analysis.” See Parrish v. St. Joseph's/Candler Health Sys., 364 Ga. App. 228, (2022) (quoting Intl. Harvester Co. v. Cunningham, 245 Ga. App. 736, 739 (2000)). There is no pending motion by any party to so vacate or amend any Order of the Floyd County Probate Court.

Here, the Court has invited counsel for the parties and counsel for the Ward to share their opinions and thoughts during the status conference as to whether and to what extent this court should rely on the past orders of the Court, schedule oral arguments on all of the pending motions, appoint a guardian ad litem for the proposed ward, set a scheduling order for all of the above, and move the case toward the jury trial that has been demanded by the Counter-petitioner, Jeff Carney. Based upon the results of said conference, this Court orders as follows:

1.

All motions presently pending before the court are hereby dismissed and/or withdrawn by the parties. Further, neither party shall file any challenges to the qualifications of each of the parties' current co-petitioners.

2.

The attorney for the proposed Ward shall be provided with sufficient waivers by Jeff Carney so that she may obtain information from all of the health providers that have information concerning the proposed Ward's past, present, and future healthcare, including but not limited to her medication regimens, prescriptions, etc. She shall also be authorized to speak with any and all caregivers regarding all of these issues. Nothing in this Order prevents the attorney for the proposed ward from raising with medical providers any issues regarding treatment, including whether or not it would be helpful for the proposed Ward to undergo a neuropsychological examination and/or an examination by a geriatrician. If, after consultation with Ms. Carney's treating physicians, the proposed ward's attorney wishes to seek such evaluation, she may petition the Court for leave to do so. Such examination, to the extent not covered by insurance, would be at the sole expense of Jerome Carney.

3.

Jerome Carney has, at the status hearing, proposed the appointment of a guardian ad litem; however, such appointment is within the discretion of this court regardless of the prior appointment of a guardian ad litem in the Floyd County Probate Court. The court finds, at least for the moment, no reason that the attorney for the proposed Ward cannot respond sufficiently to the parties' needs for medical information concerning the proposed Ward who is by all accounts being provided care in a memory care unit and under 24-hour care seven days per week. The

attorney for the proposed Ward shall provide to both parties all medical records for the proposed ward that she obtains, including, without limitation, medical reports, hospital/office records, nurses or caregivers notes, records of history taken, examination results, diagnosis, prognosis and treatment plans, all laboratory reports, test results notes, all correspondence, and records regarding the prescription medication being provided to the proposed Ward, including but not limited to the dosage amounts and frequency of administration of each medication.

4.

Counsel for Jerome Carney will facilitate the proposed Ward's attorney by providing her a dropbox link so that she will have access to all of the filings, discovery, recordings, and other information he has collected from his client's prior counsel, except for any privileged information between him and his client and/or his client's former attorney(s).

5.

Each of the parties shall pay attorneys' fees to the proposed Ward's attorney (whose work shall be at the rate of \$250.00 per hour) of \$2,500.00 each. Should the proposed Ward's attorney require more legal fees then the Ward's estate shall pay \$5,000.00 more in attorneys' fees. Any additional attorneys' fees shall be paid by the parties upon the conclusion of this case in an amount and proportion between that parties that will be determined by the court.

6.

The parties shall file a Consolidated Pre-Trial Order conforming to Uniform Probate Court Rule 8.2 no later than November 15th, 2023, with Jerome Carney's counsel providing his portion to Jeff Carney's counsel no later than October 27, 2023, and Jeff Carney's counsel providing the proposed Consolidated Pre-Trial Order for review and approval by opposing counsel no later than November 8, 2023. No later than November 13, 2023, counsel for the

parties shall identify their concerns and issues with one another's portions of their respective portions and either work them out or submit their respective portions to the Court, individually, for the Court to consolidate as the court chooses to do.

SO ORDERED this 27th day of September, *nunc pro tunc* to August 16, 2023.

Abstract

US clinical practice guidelines for the diagnostic evaluation of cognitive impairment due to Alzheimer's disease (AD) or a related dementia (ADRD) are two decades old. This evidence-based guideline was developed to empower all clinicians to implement a structured approach for evaluating a patient with symptoms that may represent clinical AD/ADRD. An expert workgroup conducted a review of 7374 publications (133 met inclusion criteria) and developed recommendations as steps in an evaluation process. This summary briefly reviews core recommendations and details special-

Highlights

- US clinical practice guidelines for the diagnostic evaluation of cognitive impairment due to Alzheimer's disease (AD) or related dementias (ADRD) are decades old and aimed at specialists.
- This evidence-based guideline was developed to empower all—including primary care—clinicians to implement a structured approach for evaluating a patient with symptoms that may represent clinical AD/ADRD.
- This summary focuses on recommendations appropriate for specialty practice settings, forming key elements of a high-quality, evidence-supported evaluation process aimed at characterizing, diagnosing, and disclosing the patient's cognitive functional status, cognitive-behavioral syndrome, and likely underlying brain disease so that optimal care plans to maximize patient/care partner dyad quality of life can be developed; a companion article summarizes primary care recommendations.
- If clinicians use this guideline and health-care systems provide adequate resources, outcomes should improve in most patients in most practice settings.

1 | INTRODUCTION

A major global health challenge is the timely detection, accurate diagnosis, appropriate disclosure, and proper management of mild cognitive impairment (MCI) or dementia due to Alzheimer's disease (AD) or AD related dementias (ADRD), which include frontotemporal lobar degeneration (FTLD), Lewy body disease (LBD), vascular contributions to cognitive impairment and dementia (VCID), mixed etiology dementias, and others, which in aggregate is a major public health burden.¹⁻³ Although some primary care providers (PCPs) are comfortable diagnosing and managing patients with dementia, many PCPs, hospitalists, and emergency room specialists express a preference and refer patients with cognitive symptoms to neurologists, geriatricians, or geriatric psychiatrists.³ Evidence shows that timely diagnosis is associated with meaningful medical and psychosocial benefits⁴⁻¹¹ as well as reduced societal and health-care costs.^{2,4,6,12} Barriers to timely

diagnosis and disclosure of MCI or dementia due to AD/ADRD are multifactorial, but many could be mitigated by development and adoption of contemporary evidence-based clinical practice guidelines for the diagnostic evaluation of suspected MCI or dementia, incorporating current perspectives on the essential roles of biomarkers in specialty practice.

To address these gaps, the Alzheimer's Association convened a Diagnostic Evaluation, Testing, Counseling and Disclosure Clinical Practice Guideline Workgroup (the DETeCD-ADRD CPG Workgroup), as summarized in the companion article focused on primary care.¹³ The purpose of the patient-centered evaluation process is to provide timely, accurate, and compassionate diagnosis, disclosure, and counseling regarding stage of functional impairment (cognitive functional status), the constellation of symptoms and signs of the illness (cognitive-behavioral syndrome), and the likely underlying disease(s) and conditions that are contributing to it—ultimately to ensure that all

RESEARCH IN CONTEXT

1. **Systematic review:** Through a modified-Delphi approach and guideline-development process (7,374 publications were reviewed; 133 met inclusion criteria) an expert workgroup developed recommendations as steps in a patient-centered evaluation process.
2. **Interpretation:** This summary focuses on recommendations appropriate for a specialty practice setting, forming core elements of a high-quality, evidence-supported evaluation process aimed at characterizing, diagnosing and disclosing the patient's Cognitive Functional Status, Cognitive-Behavioral Syndrome, and likely underlying brain disease.
3. **Future directions:** If clinicians use this guideline and healthcare systems provide adequate resources, outcomes should improve in most patients in most practice settings.

potential medical and psychosocial issues are considered so that a care plan can be developed to optimize goals, function, and quality of life for the patient and family.

Here, we briefly summarize the core elements of a high-quality patient-centered evaluation and disclosure process that are appropriate for primary care and any other practice setting (additional details on these elements are summarized in the companion article) and provide specific information on the recommendations aimed toward specialists and dementia subspecialists.

2 | METHODS

The methods used in the DETeCD-ADRD CPG workgroup process are described in the companion article focused on primary care and supplementary material (see [supporting information Material](#)). The first 11 recommendations are described in detail in the companion article and summarized very briefly here. Recommendations 12–19 focus on steps in the process typically performed by specialty and subspecialty practitioners and are detailed here (see [Box 1](#) for complete recommendations).

2.1 | Framework of the DETeCD-ADRD guideline

As detailed in the companion article focused on primary care, the workgroup considered a major goal of the diagnostic evaluation process to be the development of a three-step diagnostic formulation.

The first step is to delineate the cognitive functional status (i.e., the overall level of impairment). The second step is to characterize the patient's cognitive-behavioral syndrome, which sets prior probabilities for the likely underlying cause(s) (and potential contributing factors, conditions, and disorders) and plays a critical role in guiding diagnostic decision making. Finally, the third step is for the clinician to generate and narrow the differential diagnosis of the brain disease(s) or disorder(s) that is the likely cause(s) of the patient's cognitive-behavioral syndrome, recognizing the importance of differentiating AD from ADRD or other diseases, disorders (e.g., mood disorders), medical conditions (e.g., sleep apnea), and factors (e.g., effects of medications or substance use) that may cause or contribute to cognitive or behavioral symptoms. The guideline also emphasizes the importance of identifying accompanying factors or conditions that may exacerbate symptoms, which may or may not be possible to ameliorate with medical or behavioral treatments; and of promoting brain-healthy behaviors (see [Box 2](#) on brain-healthy behaviors in companion manuscript for primary care).^{13,17}

To accomplish the three steps of the diagnostic formulation, the evaluation follows a multi-tiered approach so the clinician can select assessments and tests that follow a structured process but are tailored to the individual patient's circumstances. The three steps of the diagnostic formulation may be relatively straightforward to determine by following a process of seven core elements and using the first tier of assessment and diagnostic tests in a primary care setting, or they may require additional consultation (e.g., neuropsychological evaluation) and tiers of assessments and tests in the primary care, specialty, or dementia subspecialty settings.

2.2 | DETeCD-ADRD core elements of diagnostic and disclosure process and recommendations: A brief summary

The first 11 recommendations, briefly summarized here, are detailed in the companion article. These recommendations follow a series of seven core elements as illustrated in [Figure 1](#).

2.2.1 | Core element one: Whom to evaluate and how to establish shared goals

The first core element of the process, covered by Recommendations 1 through 3, addresses foundational considerations when initiating and proceeding through a diagnostic evaluation and disclosure process. The DETeCD-ADRD CPG emphasized the critical importance—in most situations—of including both the patient and an informant or care partner in the diagnostic and disclosure process.

Alzheimer's Association

biomarkers (BBMs) in the diagnostic workup of suspected Alzheimer's disease (AD) within specialized care settings. The scope focuses on individuals with objective cognitive impairment, including those with mild cognitive impairment (MCI) or dementia, who are undergoing evaluation by providers trained and experienced in memory disorders, where AD is the suspected underlying etiology.

METHODS: The panel conducted a systematic review to assess the diagnostic accuracy of BBMs in detecting AD pathology. The BBMs of interest included plasma phosphorylated-tau (p-tau) and amyloid-beta ($A\beta$) tests measuring the following analytes: p-tau217, ratio of p-tau217 to non-p-tau217 $\times 100$ (%p-tau17), p-tau181, p-tau231, and ratio of $A\beta_{42}$ to $A\beta_{40}$. The reference standard tests included cerebrospinal fluid (CSF) AD biomarkers, amyloid positron emission tomography (PET), or neuropathology. The panel applied the Grading of Recommendations, Assessment, Development, and Evaluation (GRADE) approach to assess the certainty of the evidence and the GRADE evidence-to-decision (EtD) Framework to develop its recommendations.

RECOMMENDATIONS: The key recommendations in this Clinical Practice Guideline (CPG) are: (1) BBM tests with $\geq 90\%$ sensitivity and $\geq 75\%$ specificity can be used as a triaging test and (2) BBM tests with $\geq 90\%$ sensitivity and specificity can serve as a substitute for amyloid PET imaging or CSF AD biomarker testing in patients with cognitive impairment presenting to specialized care for memory disorders. The panel cautions users of this guideline that there is significant variability in diagnostic test accuracy and many commercially available BBM tests do not meet these thresholds, especially using a single cutoff. Additionally, these tests do not serve as a substitute for comprehensive clinical evaluation by a healthcare professional and should be used only as part of a full diagnostic workup of patients with cognitive impairment presenting to specialized care settings, and with careful consideration of pretest probability of AD pathology.

CONCLUSIONS AND PRACTICAL IMPLICATIONS: This CPG provides performance-based, brand-agnostic recommendations for the use of BBMs in the diagnostic workup of suspected AD within specialized care settings. By linking recommendations to a systematic review and associated living updates, and using a robust and transparent methodology, the guideline ensures scientific rigor, adaptability, and sustained relevance as evidence evolves. Clinicians are encouraged to stay informed about emerging paradigms—such as biomarker combinations or ratios and multi-threshold testing—that may further refine the diagnostic accuracy of BBMs as the field evolves.

KEYWORDS

Alzheimer's disease, blood-based biomarkers, clinical practice guideline, diagnosis

1 | INTRODUCTION

Alzheimer's disease (AD) is the leading cause of dementia, contributing to an estimated 60% to 80% of all dementias. According to the Alzheimer's Association *Facts & Figures* report, approximately 7.2 million Americans are living with AD dementia in 2025. This number is projected to double by 2060, highlighting a growing public health crisis

as the population ages.¹ Pathologically, AD is defined by the accumulation of extracellular cortical plaques composed of amyloid beta ($A\beta$) fibrils and intracellular neurofibrillary tangles containing abnormal hyperphosphorylated tau protein.² These pathologies manifest many years or even decades before the onset of clinical symptoms, marking a prolonged preclinical phase during which progressive brain damage occurs.³

RESEARCH IN CONTEXT

1. **Systematic review:** The Alzheimer's Association has recently launched an initiative to develop evidence-based clinical practice guidelines using the Grading of Recommendations, Assessment, Development, and Evaluation (GRADE) approach, aiming to apply a rigorous and transparent methodology to the development of guidelines for clinicians. In the context of Diagnostic Test Accuracy, GRADE emphasizes the use of systematic reviews to inform the diagnostic accuracy of emerging tools, such as blood-based biomarkers, and their impact on outcomes that matter most to patients. This comprehensive evidence synthesis serves as the foundation for actionable, evidence-based recommendations for clinicians, policy-makers, patients, and caregivers as part of a shared decision-making model to improve dementia diagnosis, treatment, and care. These translational research efforts are designed with the understanding that routine updates will be essential to ensure the guidelines remain current and relevant.
2. **Interpretation:** The guidelines translate complex scientific data, including, but not limited to, findings from systematic reviews, into clear, actionable recommendations for clinicians across specialties, while also informing decision-making at the policy level. The blood-based biomarker guideline presented in this manuscript specifically provides guidance on whether blood tests for Alzheimer's disease should be used in specialized care settings as part of a comprehensive diagnostic process by providers with training and experience in the diagnosis of memory disorders. Designed to support real-world clinical decision-making, these recommendations are dynamic and evolve alongside the advancing evidence base.
3. **Future directions:** The Alzheimer's Association will continue to expand clinical topics for guideline development and associated methodological approaches for translating scientific evidence informing the Association's guideline recommendations. Guidelines will be updated as the peer-reviewed evidence base evolves, with accompanying tools, training, and resources to support effective clinical adoption. Emerging research priorities also include collaborative approaches to conducting systematic reviews and keeping them up-to-date, and building and fostering an evidence ecosystem prioritizing data-sharing to minimize research waste.

For decades, the options for *ante mortem* detection of AD pathology have been limited to tests that are either expensive, such as positron emission tomography (PET), or invasive but safe when properly performed, such as cerebrospinal fluid (CSF)-based biomarker analysis.^{4,5} Furthermore, these tools remain out of reach to most healthcare providers, even in many specialized clinical settings. Despite these barriers, there are multiple reasons why patients and clinicians seek in vivo confirmation of AD pathology. A key driver is higher diagnostic accuracy, since AD is often misdiagnosed without biomarkers, even in specialist settings.⁶ Furthermore, identifying the presence or absence of AD pathology can help narrow the etiology of cognitive impairment, guide appropriate care strategies, and provide valuable prognostic information for patients and their families.^{7,8} The recent regulatory approvals of new amyloid targeting therapies for AD, which require biomarker confirmation of amyloid pathology to determine treatment eligibility, further highlights the need.^{9–13} As these therapies are receiving regulatory approval and being marketed in different parts of the world, the demand for biomarker-based diagnostics to accurately identify eligible patients, enable early intervention, and ascertain when treatment is likely to be most effective, is expected to rise substantially.^{14,15}

In recent years, multiple blood-based biomarkers (BBMs) have become available as promising and accessible alternatives for detecting AD pathology.¹⁴ Compared to PET and CSF testing, BBMs offer several advantages: they are less costly, more accessible, and more acceptable to patients. These attributes position BBMs as promising tools to address the growing diagnostic demands.^{14,15} While several BBMs are now commercially available, diagnostic performance varies across available tests,^{16,17} and their integration into clinical practice is still inconsistent. In 2022, the Alzheimer's Association published the field's first appropriate use recommendations for BBMs in clinical practice and clinical trials.¹⁸ BBMs have been incorporated into the recently revised criteria for diagnosis and staging of AD by a workgroup of the Alzheimer's Association.³ Furthermore, the Global CEO Initiative (CEOi) on AD BBM Workgroup has recently published recommendations for the minimum acceptable performance of BBM tests.¹⁵ Despite these advances, the absence of a formal Clinical Practice Guideline (CPG) remains a critical barrier to the consistent and evidence-based application of BBMs in real-world settings.

To address this gap, the Alzheimer's Association has convened a panel of clinical and subject-matter experts, along with guideline methodologists with expertise in the Grading of Recommendations, Assessment, Development, and Evaluation (GRADE) approach. This collaborative effort has resulted in two complementary manuscripts: the present CPG, which provides formal recommendations, and a separate systematic review that presents the underlying evidence base.¹⁹ Here we outline the evidence-based CPG, which aims to provide recommendations to support clinicians, patients, and policy-makers in integrating BBMs into the diagnostic workflows of AD in cognitively impaired individuals in the care of memory disorder specialists in specialized care settings.

IN THE PROBATE COURT OF DOUGLAS COUNTY
STATE OF GEORGIA

IN RE:

DOROTHY JEAN BISHOP CARNEY,

Proposed Ward.

ESTATE NO.: 23G001

MOTION FOR A COMPREHENSIVE EVALUATION
OF THE PROPOSED WARD

Comes now, Jerome Carney, Petitioner, by and through his attorney, Gwendolyn Kennedy Green, and files this Motion to renew his request to this Honorable Court to order a comprehensive evaluation of the Proposed Ward, Dorothy Carney. In support thereof, said movant would show as follows:

1.

The Proposed Ward, Dorothy Jean Bishop Carney, is an 84-year-old memory care center resident, currently residing at The Harbor at Douglasville facility ("The Harbor"). The facility is located at 8847 Hospital Drive, Douglasville, Douglas County, Georgia 30134.

2.

The movant, Petitioner Jerome Carney, lives in Douglasville. His Co-Petitioner is Jennifer Lynn Carlile of East Point, Georgia. The Cross-Petitioner is Dr. Jeff Carney, who lives in Atlanta, Georgia. His Co-Petitioner is Bill Bishop, who resides in Rome, Georgia.

3.

Since 2022 the Proposed Ward has been the subject of a protracted legal dispute between these Petitioners concerning the appointment of a Guardian/Conservator for her. Unfortunately, her overall health is of great concern, as she is significantly more fragile now than when these proceedings began.

4.

The movant, Jerome Carney, visits with the Proposed Ward at The Harbor daily, providing hands-on care. He interacts with her extensively, assists with tasks of daily living, and engages with his mother in activities aimed at promoting better physical and cognitive fitness. Therefore, he has been able to witness, firsthand, her condition and decline.

5.

Although the movant requested an independent medical evaluation in 2023, it was vehemently objected to by the Cross-Petitioner, averring that the Proposed Ward already had medical providers.

6.

This motion is being made to request that this Court issue an order to have an independent, comprehensive evaluation of Mrs. Carney, to better determine her

healthcare needs, so that her best interests may be addressed, and the most appropriate appointment of Guardian can ultimately be determined.

7.

A comprehensive assessment has never been performed of the Proposed Ward by a competent, independent, medical professional who can make a report of findings to both the Guardian ad Litem and to this Court. The Proposed Ward was diagnosed with type-2 diabetes in her mid-40s. Currently available medical records indicate that she has regularly experienced significant glucose instability since her initial facility placement in April 2021. In 2024 alone she was admitted seven times for emergency room treatments, following six incidents of severe hyperglycemia, and one of level 2 hypoglycemia. Facility records indicate that a referral to an endocrinologist was recommended by an outside medical provider in August and September 2024, but there is no indication as to whether this recommendation was ever followed.

8.

When the Proposed Ward was in her 70s she began exhibiting symptoms of short-term memory loss. A comprehensive, differential examination, in accordance with Alzheimer's Association guidelines, has never been performed, however, to determine the specific cause of Mrs. Carney's memory loss or the most appropriate course of treatment. Multiple possible contributing factors include age-related forgetfulness, diabetes-related metabolic encephalopathy, a

family history potentially indicative of Alzheimer's disease, and a "stepwise" decline observed following two hospitalizations for diabetic ketoacidosis (DKA), potentially indicative of vascular dementia and/or blood brain barrier injury.

9.

Immediately upon the Proposed Ward's April 2021 facility placement, she was placed on a regimen of multiple daily doses of antipsychotics, despite no extant patient history warranting their use and despite no routine evaluation by a dementia specialist. These drugs are labeled with an FDA-mandated "black box" — the strongest such warning issued by the agency —advising patients that their use is linked to an increased risk of stroke and death in older adults. Additionally, the American Geriatrics Society stresses that antipsychotics are associated with a greater rate of cognitive decline, a side effect that Mrs. Carney now appears to suffer from.

10.

Specifically, relative to the antipsychotics, since her April 2021 facility placement, the proposed ward has suffered three falls sufficiently severe to require emergency room treatment, including a 2022 fall that resulted in a hip fracture. Widely cited medical journal studies have established a significant increase in fall risk (+73-78%) among elderly dementia patients who receive psychotropic medications. Following Mrs. Carney's third fall, one of the

antipsychotics she was receiving daily was finally discontinued, on the advisement of an outside medical advisor.

11.

In 2023, Mrs. Carney began exhibiting symptoms consistent with tardive movement disorders, which accelerated substantially the following year (e.g., finger-tapping, leg-crossing, rocking, and humming). Major medical organizations recognize these disorders as disabling iatrogenic side effects caused by the administration of typical (first-generation) antipsychotic medications, including the haloperidol that Mrs. Carney has been administered on a near daily basis ever since her facility placement. These symptoms compel her to frequently stand and walk, even on days when she is experiencing significant pain due to the 2022 hip fracture she sustained.

12.

On September 27, 2023, this Court ordered the production of the Proposed Ward's medical records, providing for their distribution to both the Petitioner and Cross-Petitioner:

"The attorney for the proposed Ward shall provide to both parties all medical records for the proposed Ward that she obtains, including, without limitation, medical reports, hospital/office records, nurses or caregivers notes, records of history taken, examination results, diagnosis, prognosis and treatment plans, all laboratory reports, test results notes, all correspondence, and records regarding the prescription medication being provided to the proposed Ward, including but not limited to the dosage amounts and frequency of administration of each medication."

13.

In compliance with this Order, The Harbor at Douglasville provided complete facility records for Mrs. Carney in October 2023, consisting of 439 pages for a 10-month period (January - October 2023).

14.

In early 2025, due to growing concerns about the Proposed Ward's health, Petitioner Jerome Carney sought to obtain updated records for her, pursuant to the Consent Order,. The Harbor at Douglasville ultimately provided some records in June 2025, but they consisted of only 102 pages for a 20 month-period (November 2023 - June 2025). This was only a fraction of the comprehensive medical information specified for disclosure. Most notably missing were the daily Medication Assistance Records, which all licensed assisted living facilities in Georgia are mandated to maintain under DCH Rule 111-8-63-.20(9).

15.

Facility records provided by The Harbor have included some discharge information subsequent to the Proposed Ward's emergency room visits or hospitalization, but otherwise no physician, hospital or other medical records have ever been provided pursuant to the Consent Order.

16.

In light of the Proposed Ward's observed decline in health, the failure to provide complete and updated facility and medical records for the past year, and the lack of any independent geriatric, neurological or endocrinological evaluation, there is now a dearth of information as to the Proposed Ward's current medical status, the medications that should be prescribed to her or the courses of treatment that may be afforded her.

17.

O.C.G.A Section 29-4-11 states, in pertinent part, that this Court shall appoint an evaluating physician, psychologist or licensed social worker. On these facts and due to the complication of this matter, as well as the severity of the condition of the Proposed Ward, a physician, who is a specialist in the field of geriatrics and dementia care, would be most appropriate.

18.

For more than twenty years Petitioner Jerome Carney, a former diplomat, served as liaison between Québec, the largest biopharmaceutical hub in Canada, and California, the largest life sciences industry cluster in the United States. On the basis of this experience, he identified and reached out to Dr Monica Parker for guidance on the most appropriate resources for an accurate and independent neurological evaluation of the Proposed Ward in the States of Georgia.

19.

Dr. Parker is a luminary in the field of dementia diagnosis and treatment. She currently serves as Chair of the Alzheimer's Foundation of America's Medical, Scientific & Memory Screening Advisory Board. She is also an experienced primary and geriatric care provider and an associate professor of neurology at Emory University, where she leads the Outreach, Recruitment, and Engagement Core (OREC) at the Goizueta Alzheimer's Disease Research Center (ADRC).

20.

The Goizueta ADRC is noteworthy as the only NIH-funded Alzheimer's research institution in the State of Georgia and as a national leader in Alzheimer's clinical trials, through its participation in the National Institute on Aging's Alzheimer's Clinical Trials Consortium.

21.

As of 2025, there an especially robust pipeline of 138 drugs in development for the treatment of Alzheimer's and dementia, including 45 therapeutics currently in final, Phase 3 testing. A comprehensive geriatric and neurological assessment by Emory Healthcare (the clinical affiliate of the Goizueta ADRC), including a diagnostic evaluation conducted in accordance with Alzheimer's Association guidelines, would significantly increase the Proposed Ward's ability to gain access to new therapeutics as they become available, in line

with her right to be restored to capacity, as she is guaranteed under O.C.G.A. § 29-4-20(a)(7), (2024):

22.

On this basis, Dr. Parker recommends an independent medical assessment for Mrs. Carney first by Emory Geriatrics, to be followed by an evaluation by Emory Cognitive Neurology. Dr. Parker specifically stressed that the latter department does not see patients outside of Emory Healthcare and without an updated medical assessment.

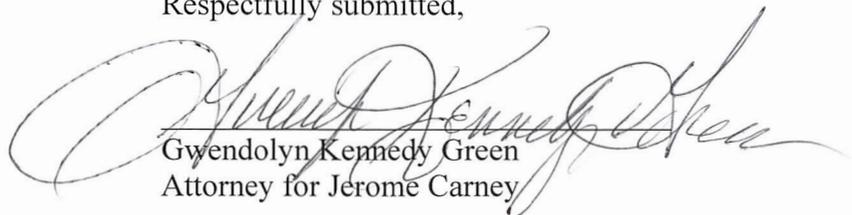

23.

A complete assessment is needed for the Proposed Ward, for the purpose of understanding her health conditions, and identifying the best course of treatment for her, while determining the most appropriate caregiver.

WHEREFORE, the Petitioner, Jerome Carney respectfully requests that this Honorable Court Order a thorough and comprehensive evaluation on the Proposed Ward by a physician and specialist, as soon as practicable.

Done this 11th day of February, 2026.

Respectfully submitted,

Gwendolyn Kennedy Green

Min-U-Script® with Word Index

1 MR. HAMBERG: Thank you, Counselor. Your
2 Honor, I think -- to remind the Court I think
3 there were two evaluations of the proposed ward,
4 one ordered by the probate court in Floyd County
5 and the second one I believe this Court had
6 ordered one. Is that right?

7 MR. MONEY: This Court did not order one,
8 and the one that was ordered after she had been
9 through a traumatic health issue, but there's
10 never been a neuropsychiatric evaluation of her
11 and my client will pay for it. He'll pay for it.
12 We just want to get it to where somebody with
13 proper expertise is there and not just somebody
14 relying on a sheet of paper with a number on the
15 bottom of the page.

16 THE COURT: Okay.

17 MR. HAMBERG: I don' know -- I mean as far
18 as another evaluation, if the Court were to
19 independently to order a neutral
20 neuropsychiatric --

21 MR. MONEY: Oh sure. Absolutely.

22 MR. HAMBERG: And not paid for by one side
23 or the other. Some other means.

24 MR. MONEY: We would be happy to split the
25 costs.

1 through they did an evaluation, and then when a
2 second petition came through they ordered an
3 additional -- said a second evaluation needed to
4 be ordered because Dr. Carney had a petition also
5 regarding the conservator.

6 THE COURT: Okay.

7 MR. HAMBERG: Your Honor, if I may add, we
8 got two of these done. I think it's in the
9 statute the court regularly appoints evaluators,
10 we've got two of them here. You can't disparage
11 those evaluations because they're not
12 neuropsychologists. A lot of times the only
13 evaluation that the court relies on is for the
14 appointment of a guardianship and conservator.
15 Not always necessary to have more advanced
16 medical expertise involved, particularly when
17 everybody consents that the proposed ward needs a
18 guardian.

19 MR. MONEY: It is beyond me when Jerome
20 Carney is willing to pay for such a superior
21 evaluation when she's not on a psychotropic
22 medication so her care can be better defined and
23 she can be better cared for and the medications
24 can be better defined, it would help her with
25 whatever level of dementia she has, yes. A

1 common evaluation will get you to not being
2 incompetent -- it just defies logic that a
3 physician client wouldn't want the best care that
4 his mother could get so that he could evaluate
5 how best to serve her.

6 THE COURT: Okay.

7 MR. HAMBERG: Your Honor, that's not the
8 right characterization. There's counsel,
9 adequate counsel for the proposed ward who
10 presumably will be talking to all these doctors.
11 We are quite willing that all these medical
12 records, even though we're after discovery, I
13 think these records should be exchanged and
14 provided. And I think counsel for the proposed
15 ward can review those and see whether things need
16 to be done, and if she thinks another doctor's
17 evaluation -- effectively now a third opinion --
18 yeah, I think we would never object to that. So
19 I think that's important because her care is
20 being managed by both Dr. Douglas now and also a
21 second team directly through the facility
22 which -- I mean these are medical professionals.

23 THE COURT: You had something to say
24 Attorney White?

25 MS. WHITE: I do. I just want to make sure

Editorial Commentary

This large retrospective study of 9,632 patients with recurrent urethral strictures highlights the negative impact of delaying urethroplasty after failure of initial endoscopic treatment. The authors should be commended for undertaking such a study and for reaffirming the current recommendation in the AUA guideline on male urethral stricture (reference 10 in article). The findings are especially meaningful given the large cohort of patients from the VA, which is the largest integrated health care system in the U.S. The findings are aligned with the literature in that urethral strictures that have previously been treated with dilation or direct visual internal urethrotomy are unlikely to be successfully treated with another endoscopic procedure, with failure rates higher than 80%.^{1,2} In addition, repeated endoscopic treatments may cause longer strictures and may increase the complexity of subsequent urethroplasty (reference 8 in article). This possibility is the basis for the recommendation in the AUA guideline, which states, "Surgeons should offer urethroplasty, instead of repeated endoscopic management for recurrent anterior urethral strictures following failed dilation or direct visual internal urethrotomy."

As the growing body of clinical evidence demonstrates, strictures respond best to initial endoscopic management when they are single, short, mild in caliber and superficial, ie confined to the urothelial layer without deep spongiositis. It is critical to refer all other strictures and cases that fail

initial endoscopic management to reconstructive urologists to ensure the highest quality of care. With more fellowship trained urologists in reconstructive urology the availability and access to urethroplasty will increase accordingly. Repeated endoscopic procedures or intermittent self-catheterization should be reserved as palliative measures for only a subset of patients who are unable to undergo or who decline urethroplasty.

IN THE PROBATE COURT
COUNTY OF FLOYD
STATE OF GEORGIA

IN RE:

DOROTHY JEAN BISHOP CARNEY,
PROPOSED WARD

ESTATE NUMBER:
22E30670

DEPOSITION OF
KENNETH JEFF CARNEY, M.D.

July 21, 2022

9:43 a.m.

208 Corporate Drive
Carrollton, Georgia

Jenna R. Johnson, CVR, CCR
Certificate No.: 5818-4261-2151-9104

1 Q That is interesting. Why do you say that?

2 A I said it, and I probably shouldn't have.

3 So I am not going to expand on it.

4 Q I understand. The door has been open. Can
5 you, please, explain what you mean by I've never met
6 your mother? I am curious.

7 A Have you met my mother?

8 Q I have never met your mother.

9 A Okay. You have never met my mother.

10 Q Why would your mother --

11 A Have you met my mother? No.

12 MS. WEINBERG: I am going to say we have a
13 responsiveness of the answer here. I do need to
14 know. I would like you to answer.

15 Q (BY MS. WEINBERG) What do you mean when you
16 say, I didn't take my mother to a neurologist and have
17 you met my mother?

18 A When I said I haven't taken my mother to a
19 neurologist, I meant I have not taken my mother to a
20 neurologist. Did you get that? I have not taken my
21 mother to a neurologist. By have you met my mother, I
22 mean have you met my mother.

23 MR. BUNCH: Hold on a second. Just explain
24 to her why you haven't.

25 THE WITNESS: My mother has very severe,

1 advanced Alzheimer's. She has had the diagnosis
2 in her charts since 2018.

3 Q (BY MS. WEINBERG) Understood. Is there a
4 reason that your mother has not seen a neurologist
5 since 2018?

6 A Ask Dr. Douglas why he has not referred her
7 to a neurologist. That is her primary care physician.

8 Q Does she require a referral to see a
9 neurologist?

10 A Yes.

11 Q What medical plan does your mother have?

12 A Medicare and she has United Healthcare
13 supplemental.

14 Q Does she have traditional Medicare?

15 A She has traditional Medicare.

16 Q And what was the supplemental?

17 A United Healthcare.

18 Q Do you know if a referral is required to see
19 a neurologist under traditional Medicare?

20 A I do not, but Dr. Douglas is her doctor, and
21 I let him make her medical decisions. He has not
22 referred her to a neurologist.

23 Q Have you taken her to a geriatric
24 specialist?

25 A I have not taken her to a geriatric

1 specialist. She has not been referred to a geriatric
2 specialist.

3 Q As you heard Dr. Douglas testify, your
4 mother has brittle diabetes?

5 A Yes.

6 Q Do you agree with that assessment?

7 A Yes.

8 Q Did you ever take your mother to see an
9 endocrinologist about that brittle diabetes?

10 A I am going to say this really clearly. My
11 mother has not been referred to a neurologist. My
12 mother has not been referred to a geriatrician, and my
13 mother has not been referred to an endocrinologist.

14 Q If a referral was not required, would you
15 take your mother to see an endocrinologist?

16 A I would at the recommendation of her primary
17 care physician, if he made that recommendation. I am
18 not my mother's doctor. I am my mother's son.

19 Q Does your mother have any medical providers
20 currently, other than Dr. Douglas?

21 A No. I am going to back up. She recently
22 had a pathologic fracture of her hip. Dr. Beck was
23 the orthopedic surgeon that repaired her fractured
24 hip. But like all surgeons, you have a patient come
25 in. You do surgery and fix them. You see them one
